**Short summary of idea***

Allow multi-select removal on user/extranet/group permissions boxes

**Application/Area**

General

**Description**

Currently trying to clear down thousands of users from having permissions to an object, it will only let you remove one at a time. I can CTRL-A to select all, but it still only removes 1 user at a time. Would be amazing to be able to select all (or multiple) and then the Remove button do them all...
