Short summary of idea*

Localisable Infocapture forms

Application/Area

Infocapture

Description

Currently the rest of Claramentis can be translated and displayed in multiple languages depending on the user account logged in. It would be extremely useful if we could also have the ability to translate forms and their section texts, statuses, form labels, drop-down pick list values, etc. We currently maintain 3 separate forms for each of the ones we have, for different languages. Over time, these have diverged from one another in some ways and to be able to have a single form to maintain which covers all 3 languages would mean a much more simplified and consistent workflow, less prone to errors and confusion.
