### Short summary of idea\*

Infocapture: Differences between the form being edited & the current live version.

### Application/Area

Infocapture

### Description

Sometimes, (OK, quite often!) I go to Infocapture Admin to look at some setting on a form, and the button at the top of the Project Properties screen is already saying "Continue editing form fields". So I end up thinking Oh God, what was I changing ??? The chances are - nothing at all, and that at some point previously I have checked the form out to look at how some field is configured, then switched to another tab, and then closed my browser etc leaving said form checked out without realising. So my instinct to then keep things tidy, is to go into the form and "Discard changes". However, I cannot be 100% positive that I didn't change something so there is a risk of doing this.

It would be GREAT if, within the Infocapture Form Editing screen I could click a button that just quickly compared the version I am looking at, with the live version currently in use and tell me if there are actually any differences, and if so, what they are, so I know whether it is safe to discard the changes.

Thanks

Mike
