Short summary of idea*

Include users list and multiple users list field as Infocapture dashboard/search filter

Application/Area

Infocapture

Description

There are times when the form has a users list or multiple users list field. I would like a filter on the infocapture search so that I can easily find tickets where my name (or a specific user) is listed in those fields. It would also be nice to include this in the infocapture dashboard filter options in the "My Issues" filter.
