Short summary of idea*

Record Created date on user records

Application/Area

People

Description

We would like to report on how many users sign up per month, however currently the system only shows me the last time they logged on. I am advised this information is not stored on the user record at all.

It would be awesome if Claromentis platform stored the date & time of when a user record was created on said record, just as they do with the last time log in date & time, so this could be seen and reported on.
