Short summary of idea*

Subcategory navigation in Policy Manager - 8.1+

Application/Area

Policy Manager

Description

We currently use Claromentis 7.4 and we have thousands of documents in our Policy Manager, organized in categories and subcategories. Users can navigate through the entire folder system in the My Policies section in 7.4. But in Claromentis 8.1 (and I assume 8.2/8.3), that option isn't available. Instead, every document in the category is displayed with no subcategories visible. It would be difficult to retrain our users to use the left-hand menu, and overall I think it's harder to navigate the Policy Manager in the new format. Can the previous navigation setup be restored in a future release?
