Short summary of idea*

Export page to pdf

Application/Area

Policy Manager

Description

It would be really useful to be able to export pages in policy manager on the same level as with Claromentis articles.

Where i.e. you have external parties requesting copies of your documents, it will require a lot of manual work to copy the text into a separate document to then share it compared to having the option of directly exporting the page. Also without this option you have no integrity to the documents.
