Our Product Owners will review your ideas monthly and you will be notified on any changes made to the status of your ideas. We will let you know personally once your idea has been scheduled.

Make sure you also vote on ideas that you want to see in the product, as we will take this into account when deciding on what ideas to implement.

If you have an immediate need for a feature please submit a Change Request instead.

Short summary of idea*

Auto Detection of Directory on Login

Application/Area

Other

Description

When logging in, if you have a mix of users (AD and local), the user must select the correct directory. An even bigger issue is that if the user switches the directory from the default and mistypes their username or password the directory resets back to the default.

It would be nice if the user didn't even have to select a directory and the system just auto detected it based on their username.
