Our Product Owners will review your ideas monthly and you will be notified on any changes made to the status of your ideas. We will let you know personally once your idea has been scheduled.
Make sure you also vote on ideas that you want to see in the product, as we will take this into account when deciding on what ideas to implement.
If you have an immediate need for a feature please submit a Change Request instead.

Short summary of idea*
Field condition sets testing if the value of two fields match

Application/Area
Infocapture

Description
I suggest the ability to create a conditional statement that compares the value of two fields within a form (string vs string, int vs int), and ability to trigger an action based upon the results of the comparison. For example, if the name in a user list dropdown field matches value of a field with the auto-poplulated name of the submitter of the ticket, then perform a specific action (trigger a)... else perform a different action (trigger b).
