Our Product Owners will review your ideas monthly and you will be notified on any changes made to the status of your ideas. We will let you know personally once your idea has been scheduled.

Make sure you also vote on ideas that you want to see in the product, as we will take this into account when deciding on what ideas to implement.

If you have an immediate need for a feature please submit a Change Request instead.

Short summary of idea*

Toggle Document View between details and full screen

Application/Area

Documents

Description

It would be nice if a user could toggle back and forth between documents views easily.

We can program the default of a document to be either document properties view (preview window of doc with details of when it was created, by whom, description etc to the right) when a title link is clicked on, OR full screen document view.

However, once there, there is no easy way to toggle to the other view. It would be so helpful to have a button or menu item that could allow a user to switch back and forth.
