Our Product Owners will review your ideas monthly and you will be notified on any changes made to the status of your ideas. We will let you know personally once your idea has been scheduled.

Make sure you also vote on ideas that you want to see in the product, as we will take this into account when deciding on what ideas to implement.

If you have an immediate need for a feature please submit a Change Request instead.

Short summary of idea*

Allow users to sort search results by most recent date

Application/Area

Description

Users are having a discouraging experience when doing any kind of search - whether it's a general intranet search, or in news, etc., and that is they cannot sort results by date. While it's important to return results by relevancy, it's also important for users to be able to sort by date by choice. For instance, I can have news content from a source that comes out every month. When I keyword search, they results come up in a random date order, so it's very difficult for users to see them in date order and find the most recent. This is also an issue when admin users search your own site for information on either applications or release notes - we have to wade through all kinds of random dated content trying to find the most recent and relevant, and it's very frustrating.
