Our Product Owners will review your ideas monthly and you will be notified on any changes made to the status of your ideas. We will let you know personally once your idea has been scheduled.

Make sure you also vote on ideas that you want to see in the product, as we will take this into account when deciding on what ideas to implement.

If you have an immediate need for a feature please submit a Change Request instead.

Short summary of idea*

Drag and drop menu items

Application/Area

Menu Builder

Description

I want to be able to move a parent menu item (and its subsequent sub menu items) underneath a different parent menu item (so it becomes a sub menu item etc). At present I have to know from the get go what set up I want otherwise if i change my mind i have to manually recreate the sub menus each time with the URLs rather than drag and drop inorder to change the placement.
