Give option for People list component to hide Search field

**Application/Area**  
Pages

**Description**  
Hi,

It would be very useful and visually appealing to have an option for People list component to hide the Search field.

Our use case is that we have several departments with 10 or less people, and on a given Department's page, we are filtering the People list component to only show those in that department. Because the component is able to display all people in a department, the Search field does not provide any additional functionality (only allows searching the filtered list), and is consuming space in the component unnecessarily.

Having an option in the People list component to hide the Search box at the page designer's choice would be much appreciated!
