Our Product Owners will review your ideas monthly and you will be notified on any changes made to the status of your ideas. We will let you know personally once your idea has been scheduled.

Make sure you also vote on ideas that you want to see in the product, as we will take this into account when deciding on what ideas to implement.

If you have an immediate need for a feature please submit a Change Request instead.

Short summary of idea*

Ability to hide Admin / Testing users from People for non Admins

Application/Area

People

Description

It would be helpful to be able to hide Claromentis Administrator users and other users we have created for testing purposes from the default people list from non Admins.

When looking at the list of people, by default it shows all users, including Claromentis Administrator, our Administrator account and two testing users "Clara" and "Monty". This creates confusion as these "People" don't exist, don't have a photo and don't fit into any known department.

I've worked around this by adding a field "People_List" and included this field in search criteria so that when using People in menus and Application links, by default a filter is applied to only show People where People_List = Yes, but this affects the ease of use as now many are unsure what to do with the text that now displays in the search box by default: "People List:Yes". Default people link for us has been changed to: /people/?search_terms=People%20List%3AYes&rows_per_page=30&adv_filter=

If in People Admin specific users could be hidden from the non-Admin People list without any visible filtering by default, we would not need a work-around and could benefit from the default ease of use of the People application.
