Our Product Owners will review your ideas monthly and you will be notified on any changes made to the status of your ideas. We will let you know personally once your idea has been scheduled.
Make sure you also vote on ideas that you want to see in the product, as we will take this into account when deciding on what ideas to implement.
If you have an immediate need for a feature please submit a Change Request instead.

Short summary of idea*
Make condition set able to use date time field for _ days after value

Application/Area
Infocapture

Description
We created an InfoCapture project for handling vehicle reservations. The reservations require a reservation end date and time. When using Field condition sets to set a value that is 1 days after, we can only use a date type field to trigger the status to automatically change from 'Scheduled' to 'Competed' the next morning.

In order to accomplish this in our case, we had to add an extra date field to the form 'Reservation End Date' in order to trigger the automatic change, which requires an extra step on the part of the submitter.

If the Condition set was able to natively use a date / time field (ignoring the time part of the date time field) for the value '1 days after', then we wouldn't have to create an extra field that feels clumsy to the flow of the form.
