Please feel free to submit new product enhancement ideas. Our Product Owners will review your ideas periodically and let you know personally if your Idea has been scheduled for development.

Unfortunately, it is not possible to pick up every Idea and not every Idea will receive a reply.

Make sure you also vote on Ideas that you want to see in the product, as we will take this into account when deciding on which ideas to implement.

If you have an immediate need for a feature please submit a [Change Request \(https://discover.claromentis.com/forms/changes\)](https://discover.claromentis.com/forms/changes) instead.

### Short summary of idea\*

Complete REST API for all applications

### Application/Area

News

### Description

I would like to propose an expansion of the News API so that it supports not only read functions, but also the ability to create, update, and most importantly delete or unpublish news items through the API.

As more systems become integrated, we increasingly rely on external systems for operational tasks. This creates unnecessary manual work when certain functions cannot be automated, even though they could be implemented quite easily through the API. One clear example is the ability to automatically archive news items older than a set number of months.
