

Skype Button Integration

Overview

People

If you are using **Skype** (both Free or Business version) it is possible to have skype button in which you can initiate call or chat from the Intranet user profile by following these simple steps.

Step1

Make sure that social profile is turned on in the config file (it is on by default or you can ask our support team to check for you)

```
//Enable social profile  
$cfg_profile_social_visible = true;
```

Step2

Create custom metadata in the user profile with key "skype"

Admin » People Control Panel » Configure user profile fields » Field properties

Title

Key

Tips: This Key is the metadata field's internal name us
Key should contain only letters, numbers and "-"

Type

Show as

Default value

Editable by users

Repeatable

Can be inherited from parent

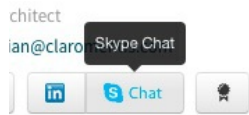

Visible

Visible even if no value

Mandatory

Step 3

Populate this field with skype username (either by self-service or bulk upload) and if it exists a Skype Chat button will be displayed.

Optional

It is possible to change this button to a Skype call button instead by customising `viewprofile.html` and instead of having

```
<component class="PeopleSkypeChatButton">
```

replace this with

```
<component class="PeopleSkypeMeButton">
```
