

Advanced CSS Customisation Endorsed

Applying CSS (Cascading Style Sheets)

1. From Admin > Infocapture, check out the form you wish to modify.
2. Switch to the 'Form styles' tab.
3. Copy and paste the code provided below to achieve the desired result.

A screenshot of the 'Bug Tracker' form editor interface. The breadcrumb trail at the top reads 'Admin / Infocapture / Bug Tracker / Edit form fields'. The main title is 'Bug Tracker' with 'Version 5' on the right. Below the title, there are two tabs: 'Form Details' and 'Form styles', with 'Form styles' highlighted by a red box. A toolbar with various icons is visible below the tabs. The main content area is titled 'Bug Details' and contains several form fields: 'Type' with radio buttons for 'Bug' and 'Enhancement'; 'Reproducibility' with a dropdown menu; 'Severity' with a dropdown menu; and 'Priority' with a dropdown menu. A text box on the right contains the instruction: 'Please provide as much information as possible, including steps to replicate the issue. Please use the file upload facility at the bottom of the form to attach any relevant files or screenshots.'

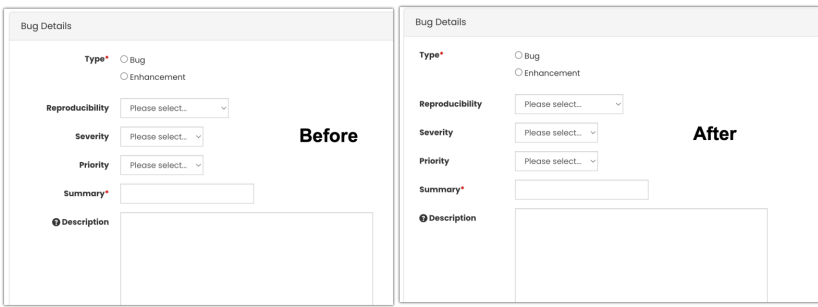

- Make all field labels left aligned

By default field labels in Infocapture are right-aligned.

Add the following code into the 'Form Styles' tab to make all field labels left-align

```
.form-horizontal .control-label {  
text-align: left;  
padding-left: 12px;  
}
```

Example:

Apply styles to field labels

Use the below code and tweak it to fit your purpose by changing the title used, the colour and the font size.

This will allow you to choose field labels to apply the styling, which can be useful to draw attention to certain fields at submission or fit your branding.

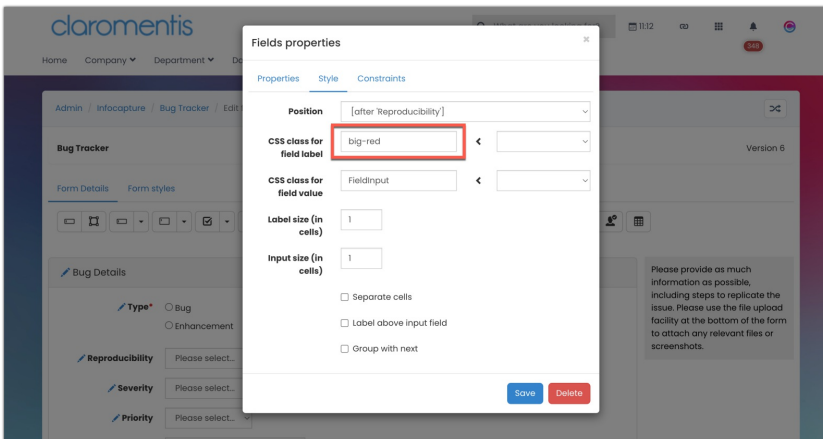

e.g. Make one of the field labels red and in a larger font.

Add the below code into the 'form styles' area.

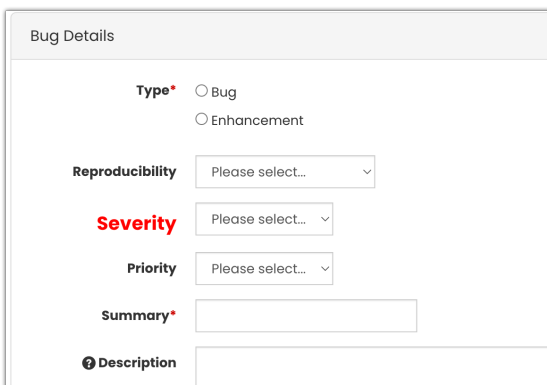

```
.big-red {
color: red;
font-size: 20px;
}
```

Edit your chosen field and enter the title of the change being made into the area shown below.

Save this and check in the form to apply.

Result:

Commenting out styles

Over time you may gain a large list of styles in the 'form styles' tab.

You can comment out styles you don't need by putting them within `/* */` symbol

```
/* these styles are commented out
.red .ic-section-title {
background-color: #ffb3ba;
color: red;
*/
```
