## Embed Facebook Feed into Pages

---

### Overview

How to embed your Facebook page timeline using Embed Component on Pages (available from Claromentis 8.2).

### Step 1

Go to

Facebook Page  
Plugin

*Please note that you can only embed feed from Facebook Pages, such as company or organisation pages on Facebook and not your personal feed.*

### Step 2

Enter the Facebook Page URL you wish to embed, see example below.

Width: 280 if you wish to fit the embed into a single column.

Facebook Page URL

Width

Use Small Header

Hide Cover Photo

Tabs

Height

Adapt to plugin container width

Show Friend's Faces

### What if I can't see the preview?

Please make sure the Page doesn't have any restriction at all. For example **age** or **location** restriction.

On Facebook Page, navigate to **Settings** and check the restriction as shown below

After removing your page restriction, please retry to re-enter the URL in the plug-in and you should now be able to see the preview and generate code.

## Step 3

Click "Get the code"

Choose **IFrame** Tab and select App ID, if you don't have App ID you may have to [Create an App ID](#) first with your Facebook Account.

The screenshot shows a browser window titled "Javascript SDK IFrame". It contains two main steps:

**Step 1: Choose your App ID**  
A dropdown menu shows "claromentis" selected. Below it, a yellow warning box states: "This app is in **Development Mode** and not available publicly. **Public Mode** can be enabled in the App Dashboard."

**Step 2: Place this code wherever you want the plugin to appear on your page.**  
A code editor contains the following HTML code:

```
<iframe src="https://www.facebook.com/plugins/page.php?
href=https%3A%2F%2Fwww.facebook.com%2Fclaromentis%2F&tabs=timeline&width=280&he
ight=500&small_header=true&adapt_container_width=true&hide_cover=false&show_fac
epile=true&appId=631027116915021" width="280" height="500"
style="border:none;overflow:hidden" scrolling="no" frameborder="0"
allowTransparency="true"></iframe>
```

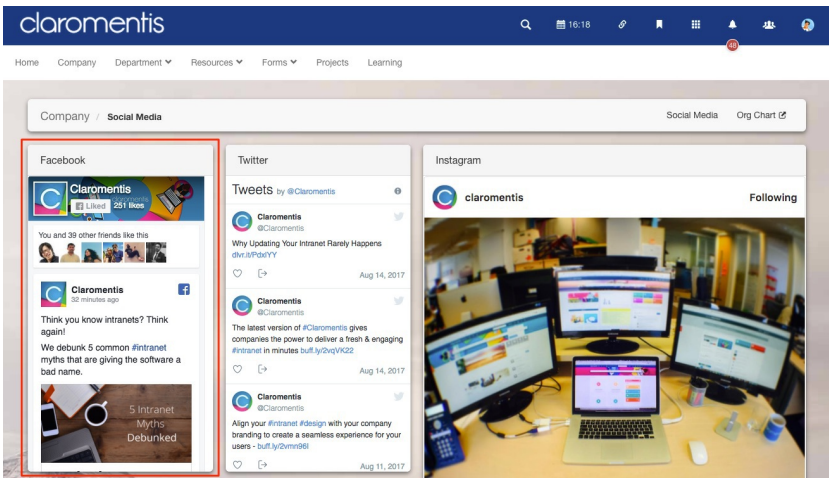

## Step 4

Copy the code and paste it on your page by selecting **Embed** Component

The screenshot shows a "Settings" dialog box for embedding a component. The "Title" field is set to "Facebook". The "Type" section has "Code" selected with a radio button, while "Video" and "Site (iframe)" are unselected. The "Paste embed code here" field contains the same HTML code as in Step 3. A "Submit" button is at the bottom of the dialog. Below the dialog, a context menu is open over a page element, with the "Embed" option highlighted. The background shows a landscape image with mountains.

Facebook Feed successfully embedded:

## Troubleshooting

4 April 2022

Some users reported that when they're logged on to Facebook, the Page news feed is showing a message:

*"Sorry, something went wrong - Please try closing and re-opening your browser window."*

The workaround is by logging out of Facebook in the browser and you will be able to see the public news feed, alternatively, you can simply create a link to your Facebook Page directly (and without requiring an embed) via a menu item, image or Button in your Intranet.

[This issue](#) has been reported to Meta's developer network and awaiting resolution.
