## Embed Facebook Feed into Pages

---

### Overview

How to embed your Facebook page timeline using Embed Component on Pages (available from Claromentis 8.2).

### Step 1

Go to

Facebook Page Plugin

*Please note that you can only embed feed from Facebook Pages, such as company or organisation pages on Facebook and not your personal feed.*

### Step 2

Enter the Facebook Page URL you wish to embed, see example below.

Width: 280 if you wish to fit the embed into a single column.

Facebook Page URL:

Width:

Use Small Header:

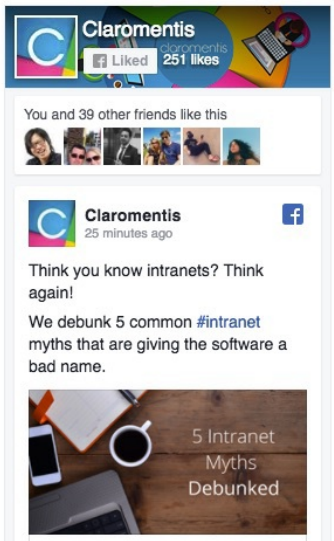

Hide Cover Photo:

Tabs:

Height:

Adapt to plugin container width:

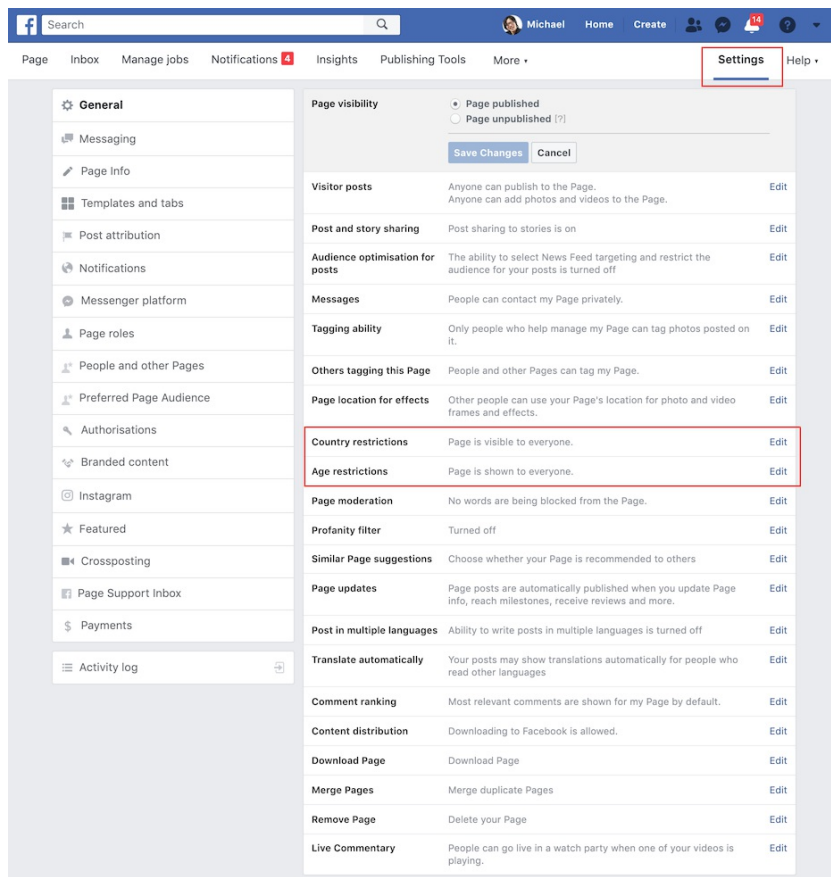

Show Friend's Faces:

What if I can't see the preview?

Please make sure the Page doesn't have any restriction at all. For example **age** or **location** restriction.

On Facebook Page, navigate to **Settings** and check the restriction as shown below

The screenshot shows the Facebook Page Settings interface. The 'Settings' tab is selected. In the left-hand menu, 'Country restrictions' and 'Age restrictions' are highlighted with a red box. The main content area shows the following settings:

- Page visibility:** Page published (selected), Page unpublished [?]
- Visitor posts:** Anyone can publish to the Page. Anyone can add photos and videos to the Page.
- Post and story sharing:** Post sharing to stories is on.
- Audience optimisation for posts:** The ability to select News Feed targeting and restrict the audience for your posts is turned off.
- Messages:** People can contact my Page privately.
- Tagging ability:** Only people who help manage my Page can tag photos posted on it.
- Others tagging this Page:** People and other Pages can tag my Page.
- Page location for effects:** Other people can use your Page's location for photo and video frames and effects.
- Country restrictions:** Page is visible to everyone. (Highlighted with a red box)
- Age restrictions:** Page is shown to everyone. (Highlighted with a red box)
- Page moderation:** No words are being blocked from the Page.
- Profanity filter:** Turned off.
- Similar Page suggestions:** Choose whether your Page is recommended to others.
- Page updates:** Page posts are automatically published when you update Page info, reach milestones, receive reviews and more.
- Post in multiple languages:** Ability to write posts in multiple languages is turned off.
- Translate automatically:** Your posts may show translations automatically for people who read other languages.
- Comment ranking:** Most relevant comments are shown for my Page by default.
- Content distribution:** Downloading to Facebook is allowed.
- Download Page:** Download Page.
- Merge Pages:** Merge duplicate Pages.
- Remove Page:** Delete your Page.
- Live Commentary:** People can go live in a watch party when one of your videos is playing.

After removing your page restriction, please retry to re-enter the URL in the plug-in and you should now be able to see the preview and generate code.

### Step 3

Click "Get the code"

Choose IFrame Tab and select App ID, if you don't have App ID you may have to [Create an App ID](#) first with your Facebook Account.

The screenshot shows the 'Javascript SDK IFrame' configuration window. It has a dropdown menu for 'App ID' set to 'claromentis'. A yellow warning box states: 'This app is in Development Mode and not available publicly. Public Mode can be enabled in the App Dashboard.' Below this, 'Step 2: Place this code wherever you want the plugin to appear on your page.' is followed by a code block containing the following HTML: 

```
<iframe src="https://www.facebook.com/plugins/page.php?href=https%3A%2F%2Fwww.facebook.com%2Fclaromentis%2F&tabs=timeline&width=280&height=500&small_header=true&adapt_container_width=true&hide_cover=false&show_facpile=true&appId=631027116915021" width="280" height="500" style="border:none;overflow:hidden" scrolling="no" frameborder="0" allowTransparency="true"></iframe>
```

### Step 4

Copy the code and paste it on your page by selecting Embed Component

The screenshot shows a 'Settings' dialog box for embedding a component. The 'Title' field is set to 'Facebook'. The 'Type' section has 'Code' selected. The 'Paste embed code here' field contains the same HTML code as in Step 3. A 'Submit' button is at the bottom. Below the dialog, an 'Embed' button is visible on a component card.

Facebook Feed successfully embedded:

The screenshot shows the Claromentis website interface. At the top is a navigation bar with the company name and various menu items. Below is a 'Social Media' section with three columns: Facebook, Twitter, and Instagram. The Facebook column is highlighted with a red box and shows a feed of posts from Claromentis, including one about debunking intranet myths.

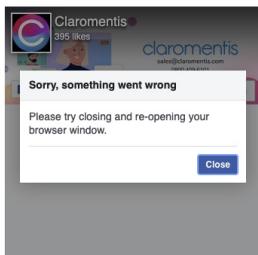

# Troubleshooting

4 April 2022

Some users reported that when they're logged on to Facebook, the Page news feed is showing a message:

*"Sorry, something went wrong - Please try closing and re-opening your browser window."*

The workaround is by logging out of Facebook in the browser and you will be able to see the public news feed, alternatively, you can simply create a link to your Facebook Page directly (and without requiring an embed) via a menu item, image or Button in your Intranet.

[This issue](#) has been reported to Meta's developer network and awaiting resolution.
