

Embed Facebook Feed on a Page

Overview

How to embed your Facebook page timeline using Embed Component on Pages (available from Claromentis 8.2).

Prerequisite

Sign up or register for Facebook Developer and create an app at <https://developers.facebook.com/apps/>

Step 1

Go to

Facebook Page
Plugin

Please note that you can only embed feed from Facebook Pages, such as company or organisation pages on Facebook and not your personal feed.

Step 2

Enter the Facebook Page URL you wish to embed, see example below.

Width: 280 if you wish to fit the embed into a single column.

Facebook Page URL

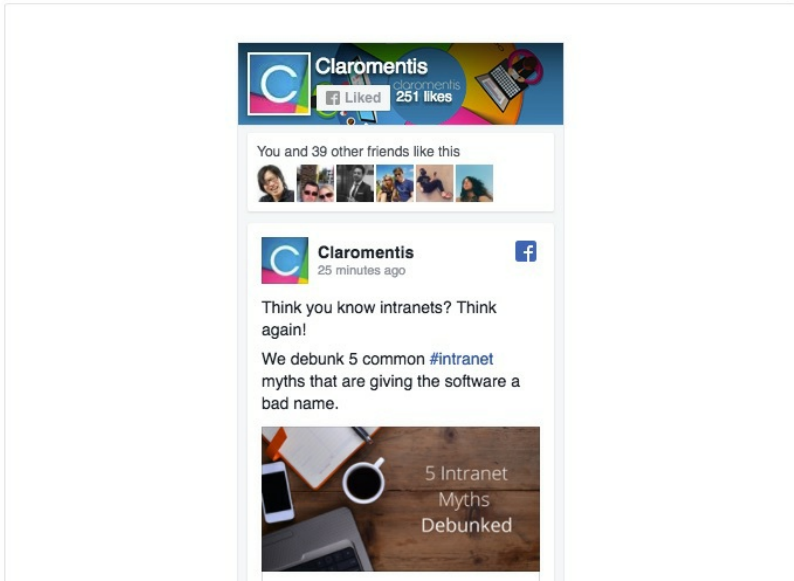

Width

Use Small Header Hide Cover Photo

Tabs

Height

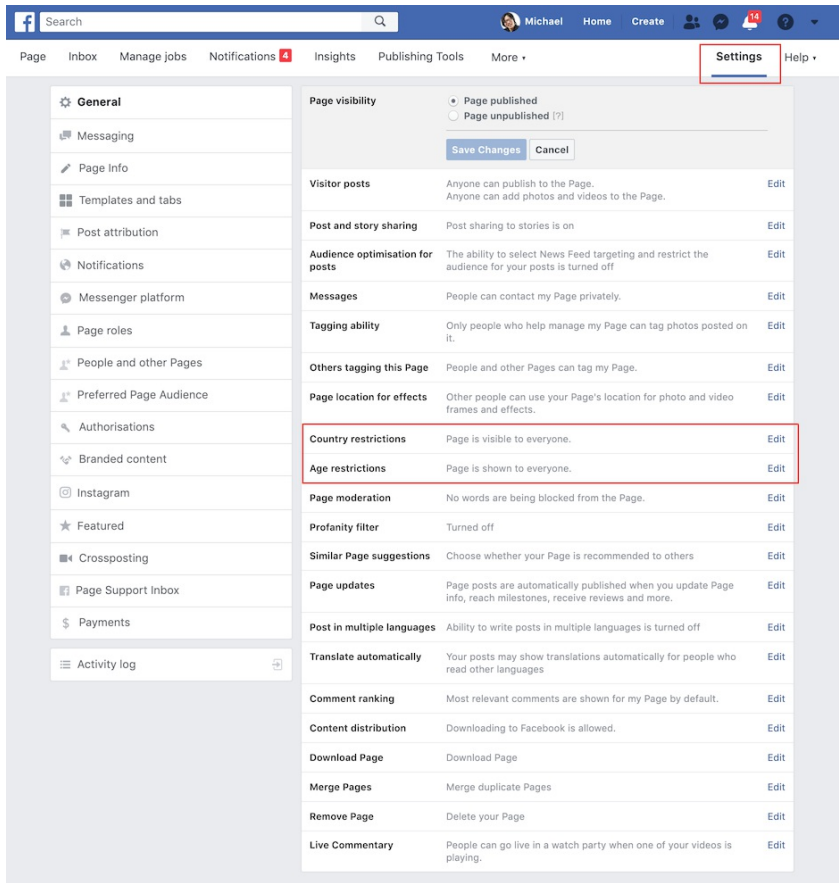

Adapt to plugin container width Show Friend's Faces

What if I can't see the preview?

Please make sure the Page doesn't have any restriction at all. For example **age** or **location** restriction.

On Facebook Page, navigate to **Settings** and check the restriction as shown below

After removing your page restriction, please retry to re-enter the URL in the plug-in and you should now be able to see the preview and generate code.

Step 3

Click "Get the code"

Choose **IFrame** Tab and select App ID, if you don't have App ID you may have to [Create an App ID](#) first with your Facebook Account.

The screenshot shows the 'Javascript SDK IFrame' configuration window. It has a tab labeled 'IFrame'. Under 'Step 1: Choose your App ID', there is a dropdown menu with 'claromentis' selected. A yellow warning box states: 'This app is in **Development Mode** and not available publicly. **Public Mode** can be enabled in the App Dashboard.' Below this, 'Step 2: Place this code wherever you want the plugin to appear on your page.' is followed by a code editor containing the following HTML code:

```
<iframe src="https://www.facebook.com/plugins/page.php?
href=https%3A%2F%2Fwww.facebook.com%2Fclaromentis%2F&tabs=timeline&width=280&he
ight=500&small_header=true&adapt_container_width=true&hide_cover=false&show_fac
epile=true&appId=631027116915021" width="280" height="500"
style="border:none;overflow:hidden" scrolling="no" frameborder="0"
allowTransparency="true"></iframe>
```

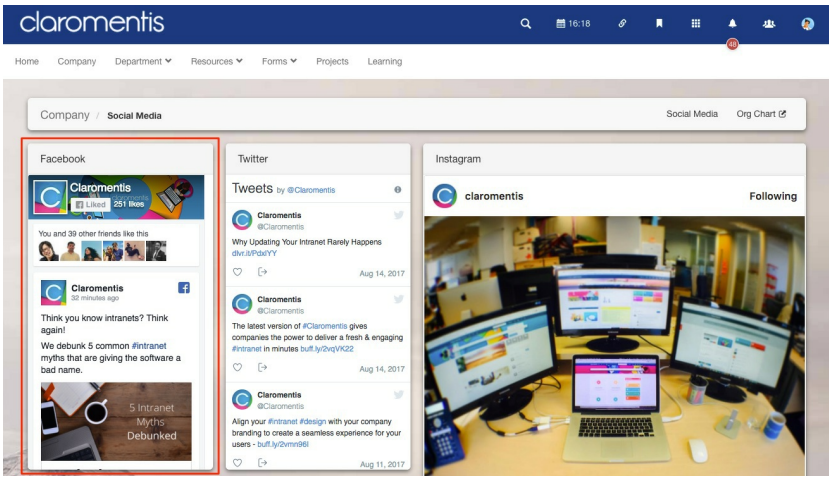

Step 4

Copy the code and paste it on your page by selecting **Embed** Component

The screenshot shows a 'Settings' dialog box for a component. The 'Title' field is set to 'Facebook'. The 'Type' section has 'Code' selected with a radio button, and 'Video' and 'Site (iframe)' are unselected. The 'Paste embed code here' field contains the same HTML code as in Step 3. A 'Submit' button is at the bottom of the dialog. Below the dialog, a context menu is open over a page element, with the 'Embed' option highlighted. The background shows a landscape image with mountains.

Facebook Feed successfully embedded:

Troubleshooting

29 Jan 2026

I'm seeing the header but not the feed (spinning wheel)

In some browsers, including Chrome, if the user is also logged on to Facebook, they won't be able to see the feed.

<https://developers.facebook.com/community/threads/321871286781329/>

Workaround

Use the JavaScript SDK version instead of iFrame and replace `data-tabs="time line"` in the parameter with `data-show-posts="true"`

4 April 2022

Some users reported that when they're logged on to Facebook, the Page news feed is showing a message:

"Sorry, something went wrong - Please try closing and re-opening your browser window."

The workaround is by logging out of Facebook in the browser and you will be able to see the public news feed, alternatively, you can simply create a link to your Facebook Page directly (and without requiring an embed) via a menu item, image or Button in your Intranet.

[This issue](#) has been reported to Meta's developer network and awaiting resolution.
