

Mobile Apps iOS and Android Endorsed

When it comes to accessing Claromentis from a mobile or tablet, there are 3 options to consider.

1. In the Mobile Browser

Smartphones and tablets come with internet browsers such as Safari or Chrome, so its possible to open this and navigate to your Intranet.

Claromentis is designed by following responsive design principles, which means its interface reacts to different screen resolutions ranging from mobile, tablet or desktop.

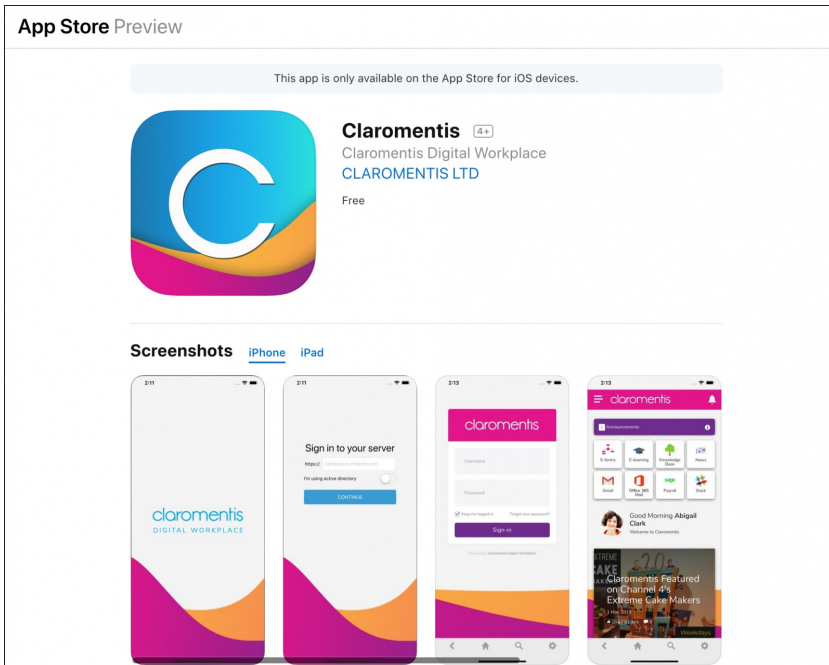

Tips! You can add Claromentis to the Home Screen on a smartphone or Tablet by following [this guide](#)

What are the benefits of accessing Claromentis via a mobile browser?

- Instant access without the need for installing an app.
- Ideal for infrequent access

2. Use the free version of the dedicated mobile app

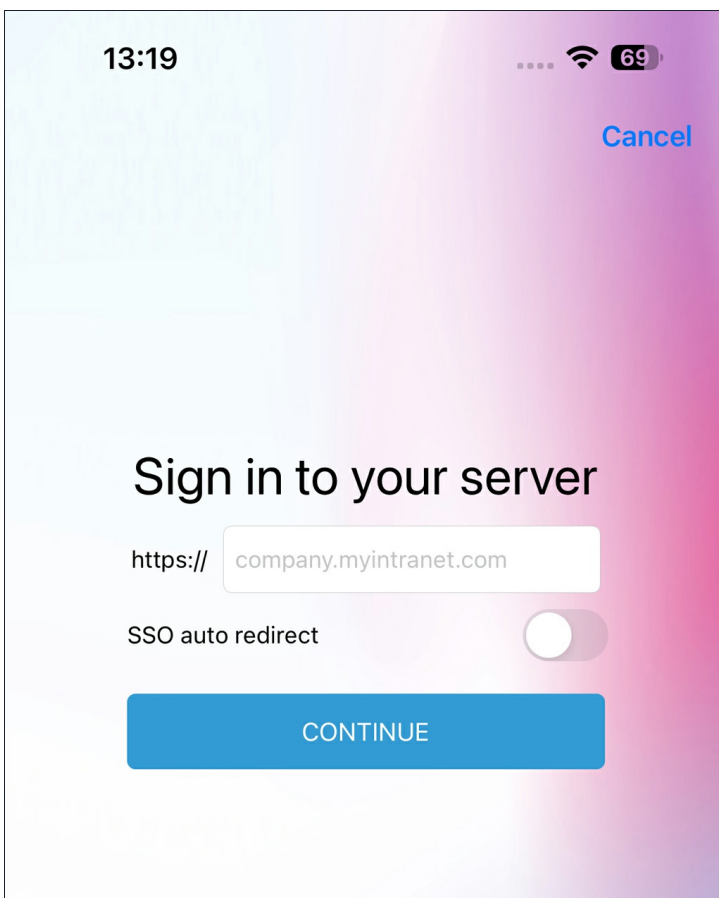

Get an official Claromentis app from Apple App Store or Google Play Store to access your intranet or digital workplace on the go on your mobile or tablet.

From App Store or Google Play, Search for **Claromentis** and download the free app on your device.

You will be prompted to enter your server address and you can log in to start browsing your site.

What are the benefits?

- The app can remember username & password

- It's a wrapper for a webpage - meaning any changes you made on the intranet will be instantly updated on the app.
- [Universal Link](#) (links to open in-app) can be configured
- Switching between multiple Clarentis instances is possible from a single app

3. Purchase a custom mobile app

We can develop a custom native mobile app for iOS and Android with your branding. More information [here](#).

Your team can ask for this by submitting a change request [here](#).

Your company or organisation may need dedicated apps for the following reasons:

- White-label - a dedicated app that reflects a company's branding
- Your organisation wish to deploy the app for your staff through Mobile Device Management (MDM)
- The system is not available publicly and requires a custom way to connect, such as VPN or by installing other apps.
- Your system may require additional security.
- You need a custom app to do just a small subset of the overall functionality of the system.

What are the benefits?

- Custom branding
- The app remembers username and password
- [Universal Link](#) (link to open in-app)
- Push notifications can be configured [OneSignal](#)
- App analytics using Firebase
