Product review

Download

Overview

Creating the right products for the right people is critical to your success. Product review surveys are a quick and effective way to determine if you are meeting the needs and expectations of your customers.

Learn what customers like and dislike and what updates you could make to improve the experience for current customers and attract new customers. Regardless of your business or product, there are insights your customers are waiting to share!

Additional features

ID prefixes and codenames: When editing the project, there is the option to add a prefix to ticket ID numbers, in this case, 'PR'.

Additionally, a codename has been used, so that the project takes on the sensible URL of /forms/productreview/ rather than a less meaningful numerical ID.
