

Edit The Application List

The application list appears in the navigation bar of a site, and when opened, shows icons that correspond to applications.

Clicking on these icons will open the front-end of that application.

The screenshot shows the Claromentis application interface. At the top, there is a navigation bar with links: Home, Company, Department, Dashboards, E-Form Examples, Learning, Projects, and Book a Demo. Below the navigation bar is a banner for the 'SDG ACTION AWARDS' with a date of 20 June 2025. To the right of the banner is a 'New Hire Hub' icon. Further down, there are sections for 'Upcoming Events' (listing 'Sales Training - Florida - 2026 Season Pinned', 'Training Event' on Thursday, 10 December 2026, 11:00 - 12:00 in Florida, USA, and 'Safeguarding Refresher' on Saturday, 20 June 2026, 12:00 - 13:00), 'Volunteer Training Week' (listing '1 joined 49 available'), and 'Current Weather'. On the right side, there is a 'Dashboard' section featuring a pie chart showing task urgency: Urgent: 4.5%, High: 27.1%, Normal: 31.8%, and Low: 36.4%. Below the chart is a table of tasks categorized by urgency: Urgent (1), High (6), Normal (7), and Low (8). At the bottom right is a calendar for October 2025.

The application list can be hidden from appearing at all in the [Design panel](#) if you would prefer users to navigate your site relying solely on your menu.

If you do have the list visible, [the main menu](#) becomes one of the main ways your user base browses and opens the applications they need to perform duties.

Subsequently, the application icons that appear to each user when the list is opened can be customised to suit different duties or tasks they need to perform.

[Application administrators](#) of Menu Builder can make the changes covered in this guide.

Consider who needs access to what

After a site is installed, all application icons will be visible to everyone who opens the list, because the 'all registered' permission is set on each icon by default.

It is perfectly fine to have all application icons appear to everyone, but there are benefits to streamlining the list to best fit what you want the users to interact with.

It can be useful to first consider the differences in access that may exist across your user base.

For example, the way basic users need to navigate the site and the applications they need to open will be different to an administrator or user with extra responsibilities like creating content.

These differences can be reflected in the application icons that appear to each user to assist site navigation if preferred.

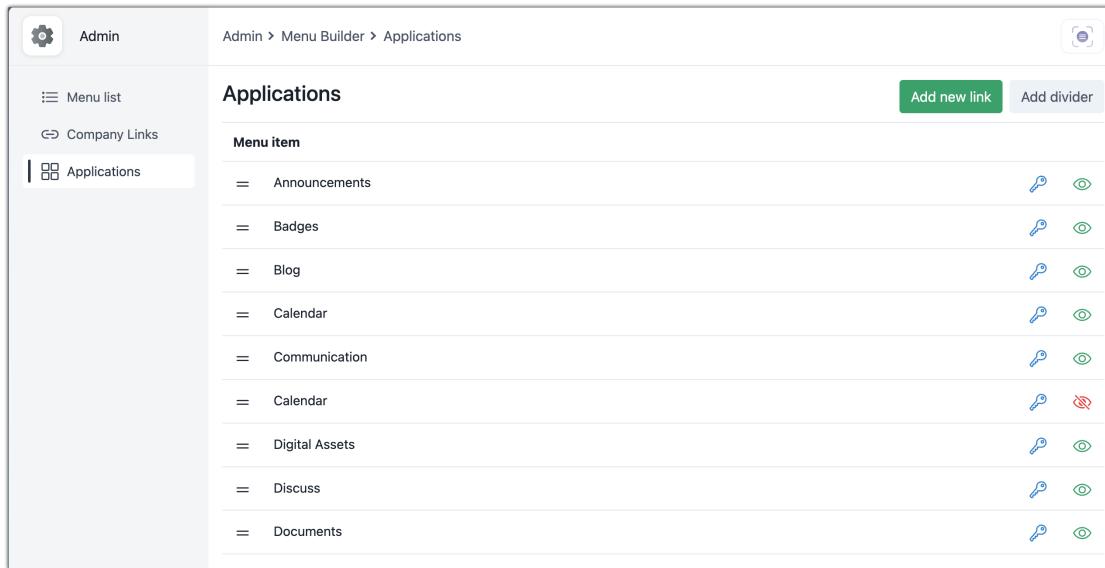

Users will only see application icons listed that they have been permitted to view, so by changing the users/roles/groups entered across the icons, a unique view is built depending on who is opening the list.

An example has been provided at the end of this article.

How to change the permissions on each icon

Head to **Admin > Menu Builder > Applications**.

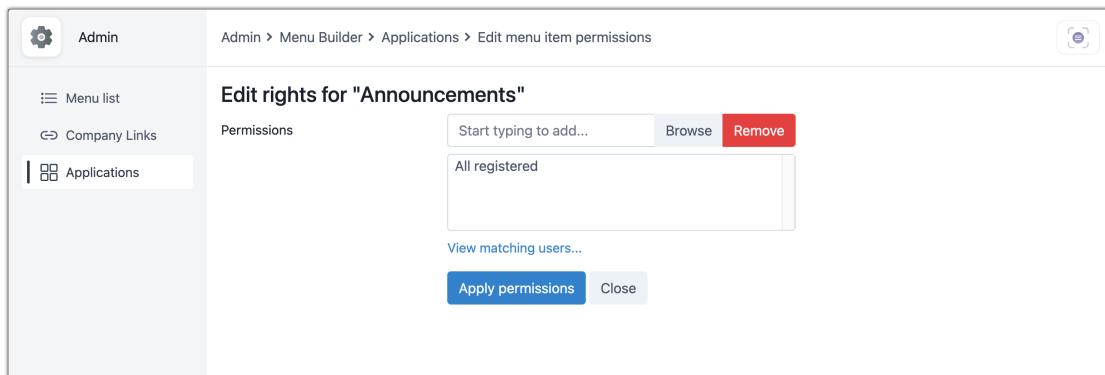

All application links will be listed:

Menu item	Add new link	Add divider
Announcements		
Badges		
Blog		
Calendar		
Communication		
Calendar		
Digital Assets		
Discuss		
Documents		

Click the key symbol to open the **View** permission for the corresponding application icon.

Change the permissions set here to update which users/roles/groups will see the icon in their application list.

Permissions	Browse	Remove
All registered		

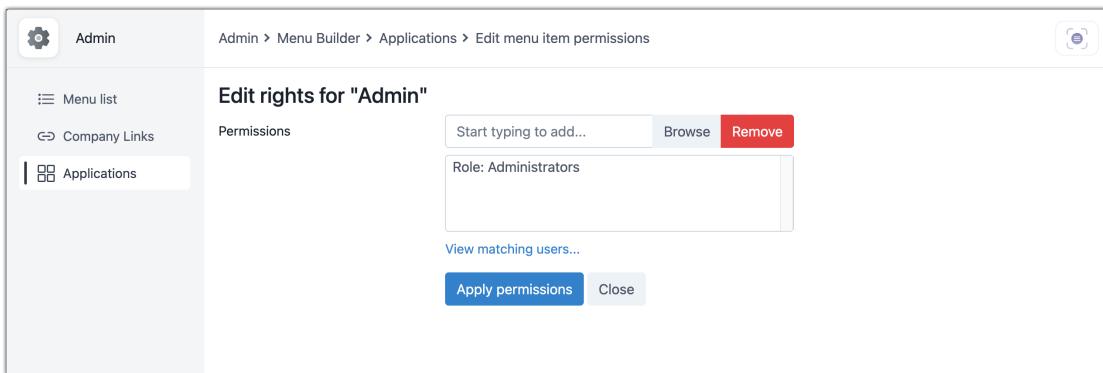

'All registered' is entered against all the links by default, so remove this and enter different users/roles/groups instead.

Anyone left out of the permission will not see the application icon in their list.

We recommend editing the **Admin** icon and ensuring only administrators via a Group or Role are allowed to view this:

Link	Icon
= Thank you	Key icon (blue)
= Courses	Key icon (blue)
= Learning	Key icon (blue)
= Quiz	Key icon (blue)
= Admin	Key icon (red)
= Pages	Key icon (blue)
= Menu Builder	Key icon (blue)
= Buttons	Key icon (blue)
= Audit Manager	Key icon (blue)
= Slider	Key icon (blue)

The admin icon leads to the admin side of applications, so it's best practice for only administrators to see and use this.

Admin > Menu Builder > Applications > Edit menu item permissions

Edit rights for "Admin"

Permissions
Start typing to add... <input type="text"/> Browse Remove
Role: Administrators

View matching users... Apply permissions Close

Toggle visibility

If you would like to hide the application buttons entirely for all users, their visibility can be toggled using the eye symbol in line with each link.

This works well for applications not in use, so it makes sense to hide the icon from everyone.

Any application with the green eye symbol will be visible (to those given permission), whereas the red eye symbol means the icon is hidden from everyone (regardless of permissions)

How to change the order of the icons

The application list is ordered alphabetically by default, but this can be changed by administrators to suit their preference and site usage.

When in **Admin > Menu Builder > Applications**, the order of the icons can be changed by dragging and dropping them.

Your browser doesn't support video.
Please download the file: [video/mp4](#)

Reload the page to test whether the order has updated based on your changes successfully.

The changes will apply to all users affected on their next page refresh or log into the system.

Application dividers

Dividers can be added to the Application list by clicking on the **Add divider** button.

Drag & drop this to change its order or delete it using the trash can icon.

Admin > Menu Builder > Applications

Applications

Menu item

- = Discuss
- = Announcements
- = Calendar
- = Badges
- = **Blog**

Add new link **Add divider**

Communication

Dividers are useful to segment applications by type or the users that will be accessing them, e.g. basic user vs administrator vs content creator.

Application List Example

Set up access on application icons based on your particular user base and the division of responsibility across it. The below is just an example of what can be achieved.

'Basic user' - 'All registered' has been left in the most popular applications icon permissions. I want them to see and interact with:

Administrators - They see all sections, including one created with another divider to include the 'admin' icon, and applications they alone manage, so no one else needs to see.

The screenshot shows the Claromentis application interface. At the top, there is a navigation bar with links for Home, Company, Department, Dashboards, and E-Form. A search bar and a clock indicating 11:10 are also present. A red box highlights the top-right corner of the interface, which contains a grid of application icons. Below this grid, a sidebar is visible with a red box highlighting the 'Admin' icon. The main content area on the left shows a news feed with a post about a local partner being shortlisted for an UN award, and a 'Discussion' section with an 'Add a comment' button.

Good Morning Claromentis Administrator
