

SaaS Staging Server Refresh

SaaS Server Refresh

Description: The work is to replace all data (database, data and application files) on Staging server with data taken from Production (Live) server

Pre-conditions: Agreement from the client that the staging content and version will be replaced by the Live content and version.

Available disk space.

Estimate: Best case: 1 hr
Usual case: 4 hr
Worst case: Depending on constraints

Constraints: Amount of data to be copied over.

Acceptance criteria: Staging site in the same state as Production from the point of data transfer.

Downtime: None for Live

Resources required: PM, Support Engineer
