

iOS & Android Mobile Universal Link

This guide is intended for **Claromentis 8.6+** and **publically accessible sites only**

What is a mobile universal link?

Mobile universal link allows user to access relevant content faster, typically when a user has a mobile app installed then the link should take user to the exact part in the mobile app rather than open a browser window in the phone which user may have to re-login.

Web Fall-Back. One of the biggest advantages of using universal links is the fall back to web. If a user encounters a universal link and doesn't have your app installed, then they will be gracefully redirected to the correct place on your website instead.

Simple. Use one URL for both your app and website.

Inter-App Communication. Other apps can communicate with your app using universal links, without needing to know if your app is installed.

Implementing a universal link for iOS

Generic App

If you are using a Generic [iOS App](#) follow instruction below:

Navigate to `Admin > System > API keys` and click on **Add a new integration** button

API name: `iosapp`

API description: `iOS Universal Link`

Entry key: `app_id`

Entry value: `4ZP5CF7YYH.com.claromentis.ios`

Custom App

Navigate to `Admin > System > API keys` and click on **Add a new integration** button

API name: `iosapp`

API description: `iOS Universal Link`

Entry key: `app_id`

Entry value: `{your unique app ID including team ID prefix }`

for example `8S877WB279.com.myintranet.name`

Add Integration

API Name and Description are required. You will also need to add at least one entry. This page cannot validate the keys you enter so test your integration in the front-end to ensure that the keys you've entered are valid and working correctly.

API Name*?	<input type="text" value="iosapp"/>		
API Description*?	<input type="text" value="iOS Universal Link"/>		
API Help?	<input type="text"/>		
Entries			
Entry Key	<input type="text" value="app_id"/>	Entry Value	<input type="text" value="8S877WB279.com.clarome"/>

Implementing a universal link for Android

Generic App

If you are using Generic Android app from [Google Play](#) follow instruction below:

Navigate to `Admin > System > API keys` and click on **Add a new integration** button

API name: `androidapp`

API description: `Android Universal Link`

Entry key: `package_name`

Entry value: `com.claromentis.app`

Entry key: `cert_fingerprint`

Entry value:

`DA:17:8C:FF:DE:AE:C7:D0:3A:DE:B8:69:5D:A5:EA:9C:94:3B:7B:F7:B1:A9:33:4D:26:32:8E:D5:E8:47:64:EB`

Custom App

Please contact mobile@claromentis.com for the details

Edit Integration

API Name and Description are required. You will also need to add at least one entry. This page cannot validate the keys you enter so test your integration in the front-end to ensure that the keys you've entered are valid and working correctly.

API Name* ? androidapp

API Description* ?

API Help ?

Entries

Entry Key	<code>package_name</code>	Entry Value	<code>com...mike</code>		
Entry Key	<code>cert_fingerprint</code>	Entry Value	<code>14:6...4:E5</code>		

[Save Changes](#)
