

## Snow Component

### Overview

Christmas is upon us so why not jazz up your page with Snow Component and here is how.

#### Minimum requirement:

Claromentis 8.3

### Step 1: Changing Intranet Background

Navigate to [Admin > Design](#)

Choose the selected theme you wish to change or edit Master Design

Navigate to Edit Style and change background using the example below which you can download here.

[Download Background](#)

**Background**

**Colour**

#ffffff

**Image background**

Here you can upload a background image for your site. For non-tiled background we recommend a resolution of 72dpi (dots per inch) and an image size of 1250x800 pixels or higher with the same

Choose file

No file chosen

☐ Delete and set default

☐ Remove background image

☐ Tile background

### Step 2: Download and Install Snowfall custom component

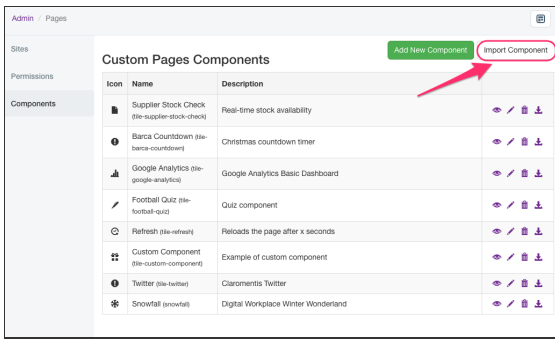

We have prepared a snowfall pages custom component which you can download below.

[Download Snowfall Component](#)

### Step 3: Installing Snowfall component

Navigate to [Admin > Pages > Component](#)

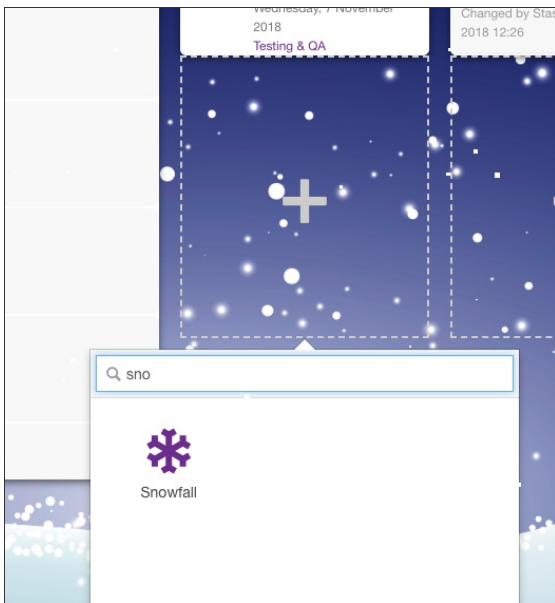

choose Import component and import the zip file that you have just recently downloaded.

## Step 4: Adding Snowfall component to a homepage

Edit the homepage, click on the space you wish to add new component and search for Snowfall.

(Please note: Performance of the component is optimal when placed at the top of a page)

## Step 5: Configure the settings according to your preference

Settings

Style

Normal

☒ Settle on components

Number of flakes

500

Flake maximum speed

5

Flake maximum size

5

Submit

## Step 6: Publish the page

... and make your page a winter wonderland..!

enjoy.
