

List of all Possible Notifications

Overview

Notifications are sent from the Intranet when certain actions are triggered across applications.

Below is a complete list of every notification and its template available in Claromentis.

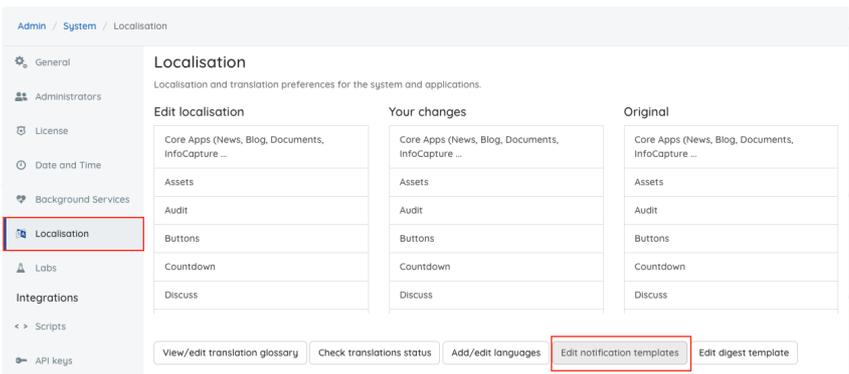

If you do not see an Intranet action listed, there is no notification triggered from this taking place.

Please raise any notification you think would be useful to include on our [Ideas portal](#) for the team to consider for future implementation.

Notification templates

Starting from **Claromentis 8.7** notification templates can be edited from `Admin/System/Localisation`

Check out our guide on making changes to the templates [here](#).

List of all notifications per application

The action that will trigger the notification is shown in the template title.

e.g. 'news.news_control.edited_news.twig' is the template that will be sent when a News article has been edited.

The circumstances around when exactly each trigger fires and who will receive the notification are covered in the corresponding article per application as linked below.
