Accessibility WAI and W3C

Claromentis are striving for balance between accessibility and usability when it comes to our web application.

We follow guidelines from various web standard initiated by W3C group which include WAI and will continue to do so.

Our platform is designed to make the most of modern web technologies which are accessible from a wide range of browsers and many devices including mobile. It is possible to improve accessibility for certain type of audience with 'special needs' through customised theme design including (high contrast, large text etc).

It is also possible to deploy a third party usability plug-in such as ReciteMe.
