

Change users default notification method in bulk

Please note this is a technical reference guide understanding value in Notification method in the SQL database and bulk import/export

Case 1

When updating users via CSV file it is possible to update their default notification method, here is what number is represent and reference.

Username	First name	Surname	Notification method
admin	Claromentis	Administrator	im
mike	Michael	Christian	email
michelle	Michelle	Christian	email
mikego	Mikego	Christian	email
hugo	Hugo	Ran	email
old	AT-AT	Drivers	email
tie	TIE	Pilot	email
storm	Storm	Trooper	email
unicorn	Rainbow	Unicorn	email
kirk	James T	Kirk	email

Case 2

Changing the value in the Configuration editor via [Admin > System > Configuration](#) (available to super admin only)

Pre Claromentis 8.7.4

cfg_default_notification_method ⓘ	json	String	im	🗑️
-----------------------------------	------	--------	----	----

String options are im, im+email, email, digest-d, digest-w, digest-m that translated to a numerical value in the database as:

- * 1 - IM + push
- * 2 - IM + email + push
- * 3 - Email
- * 4 - Daily digest
- * 5 - Weekly digest
- * 6 - Monthly digest

Claromentis 8.7.4 +

This has been changed to use bitmask value

cfg_default_notification_method ⓘ	php	Number	2
-----------------------------------	-----	--------	---

- (1) - Push
- (2) - In-System
- (4) - Immediate email
- (8) - Daily digest
- (16) - Weekly digest
- (32) - Monthly digest

Which can be combined for example to enable **Push and In-System** = 3
