

## System Time, Date and Location

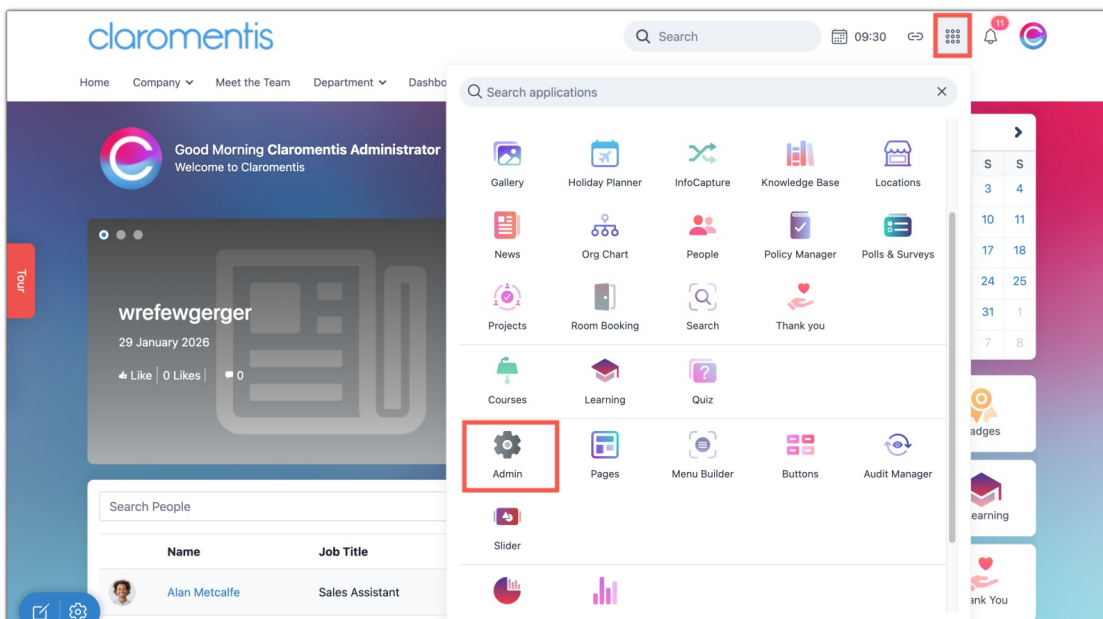

This article will guide you through the following key areas:

1. [How to set or change the default date, time and location of the site](#)
2. [How to create different timezones for users located in other areas across the world](#)
3. [How users from those timezones can select the right zone for them](#)
4. [How users can temporarily change their timezone for work trips or travel](#)

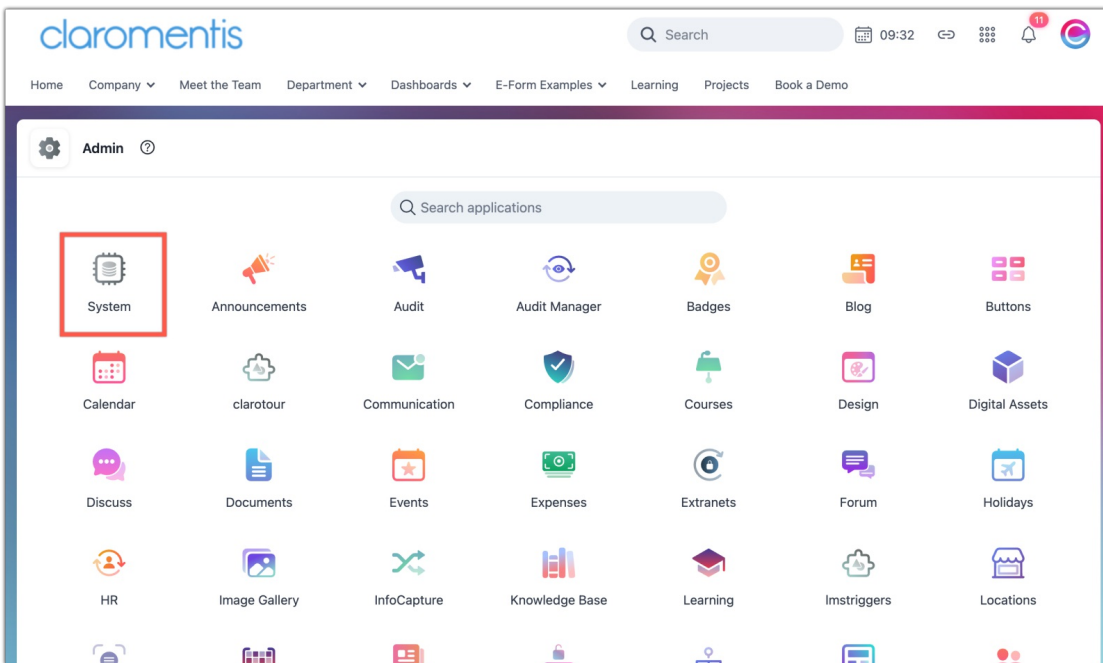

## Set or change the default date, time and location of the site

**Please note:** Only those with System Administrator permissions can access this tile. Learn how to manage these permissions using the [Sysadmin article](#).

1. Navigate to **Applications > Admin**.

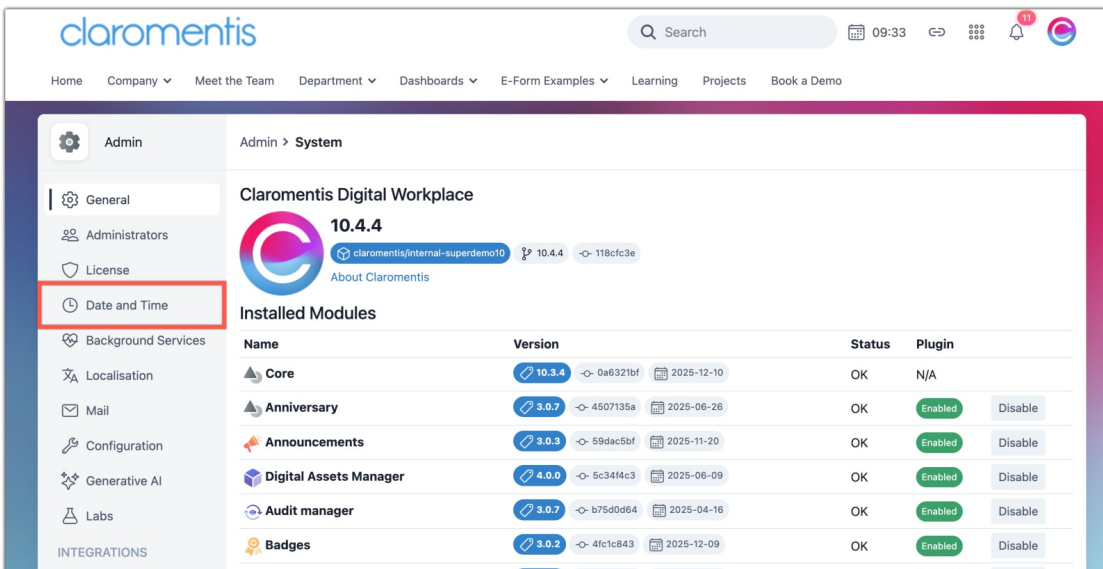

2. Select **System** to access the system panel.

3. On the left-hand menu, you should see a link to **Date and Time**.

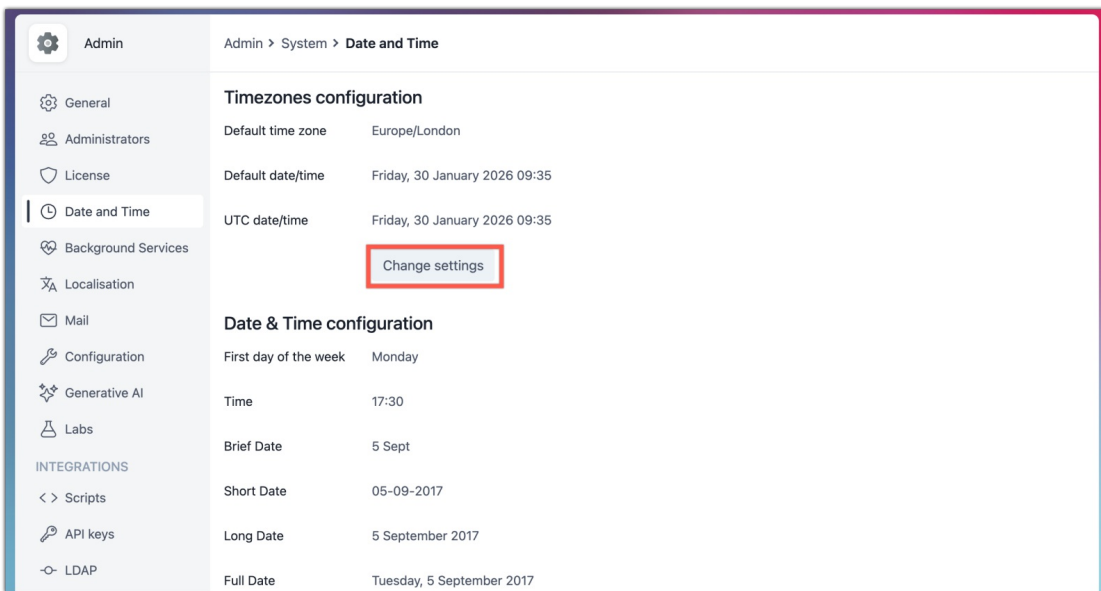

There you have two options: (1) Change time zones and (2) Change the format or configuration of the date and time.

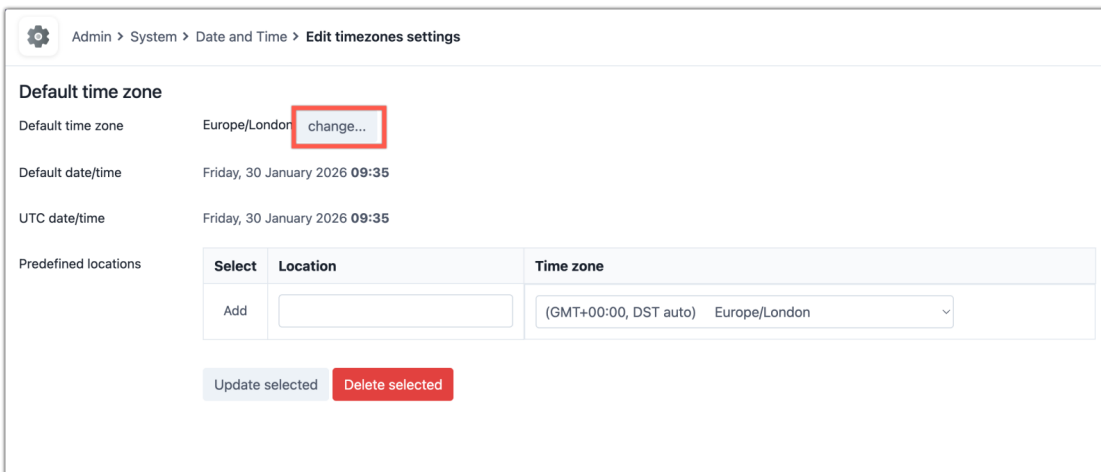

## Timezones configuration

Here, you will have the default timezone, which is best set to wherever the majority of the users are based.

1. Click **Change Settings**.

2. You have the option to amend the default time zone setting by selecting **Change...**

This change will automatically update the default date and time that new users to the site will get as standard. Everyone who still has the 'default' time setting selected in their personal profile will also see the change.

**Please note:** UTC time stands for Coordinated Universal Time and is the primary standard by which the world regulates clocks and time. This cannot be changed.

## Date & Time Configuration

In this area, it is possible to change the format of the date and time as it will appear across the Intranet.

The panel shows how the date and time will display when different configurations are used in applications.

1. Click **Change formats** to alter how each will appear.

Admin > System > **Date and Time**

### Timezones configuration

Default time zone: Europe/London

Default date/time: Friday, 30 January 2026 09:35

UTC date/time: Friday, 30 January 2026 09:35

[Change settings](#)

### Date & Time configuration

First day of the week: Monday

Time: 17:30

Brief Date: 5 Sept

Short Date: 05-09-2017

Long Date: 5 September 2017

Full Date: Tuesday, 5 September 2017

Date & Time: 05-09-2017 17:30

[Change formats](#)

2. You have the options to alter the following date formats.

Admin > System > Date and Time > **Date and time formats**

### Change date and time formats

First day of the week: Monday

Time: 17:30

Brief Date: 5 Sept

Short Date: 05-09-2017

Long Date: 5 September 2017

Full Date: Tuesday, 5 September 2017

Date & Time: Use short date and time

[Update](#)

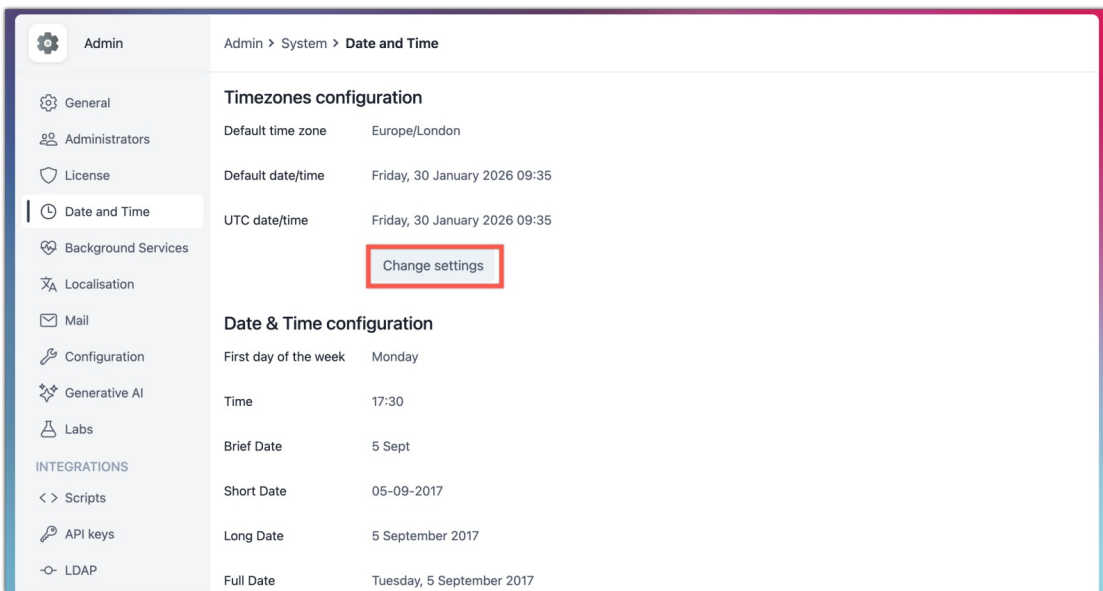

12-hour or 24-hour formats are available for all-time information, so you can customise each to display in the format that is appropriate for your end-users.

The date format can also be changed to reflect the month first, rather than the day.

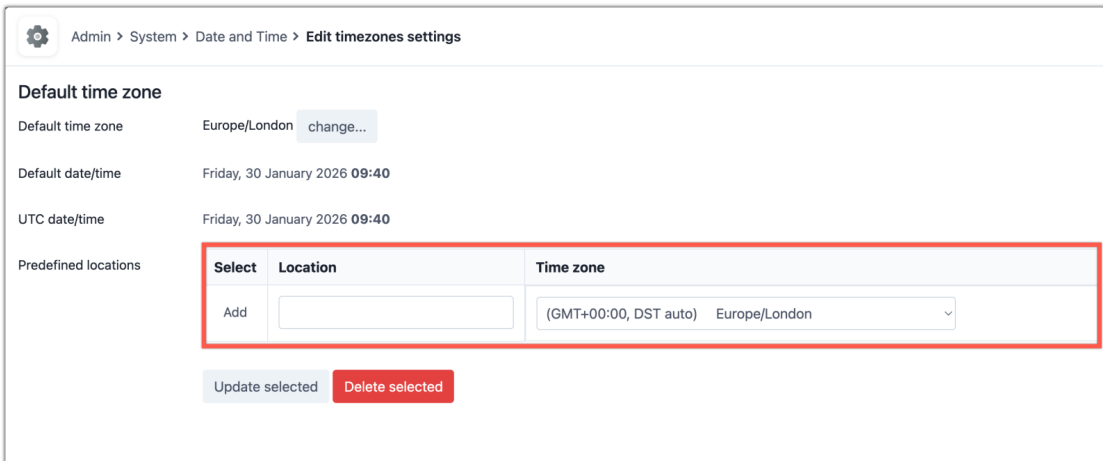

## Create different timezones for users located in other areas across the world

If you have users based all over the world, you can add each timezone. Adding time zones enables users to choose them in their profile settings.

1. Head to the **Default time zone** area.

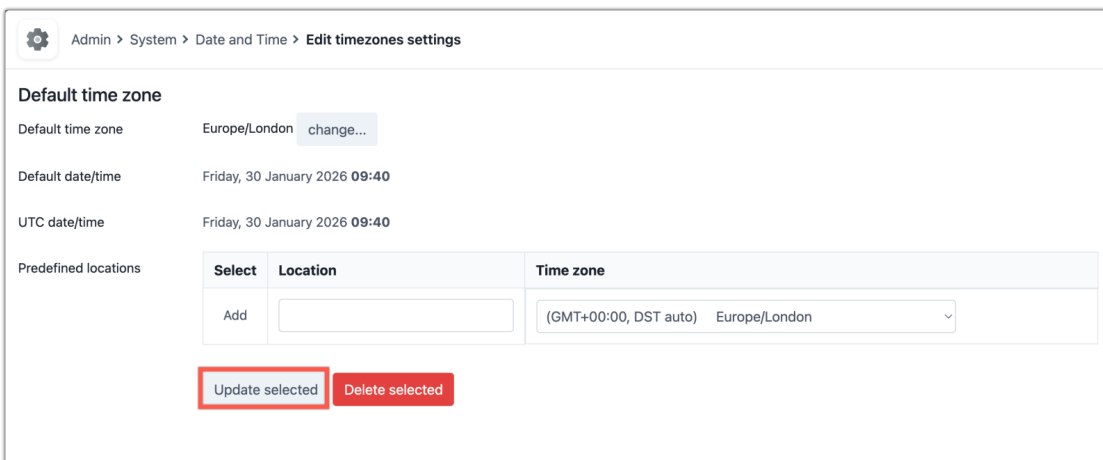

2. Enter the Location name and select the time zone you wish to add.

□ **Tip:** Simply type the label for this timezone, you could use just the main city name for example 'London' or it could be a bit more specific like the names of various offices or teams.

3. Click **Update selected**.

Below 3 new timezones have been added: London, Seoul, and New York.

These will be displayed as a predefined location in 'My Settings' for users to select from.

Admin > System > Date and Time > Edit timezones settings

**Default time zone**

Default time zone: Europe/London [change...](#)

Default date/time: Friday, 30 January 2026 09:54

UTC date/time: Friday, 30 January 2026 09:54

Predefined locations

Select	Location	Time zone
<input type="checkbox"/>	London	(GMT+00:00, DST auto) Europe/London
<input type="checkbox"/>	Seoul	(GMT+09:00) Asia/Seoul
<input type="checkbox"/>	New York	(GMT-05:00, DST auto) America/New_York
<input type="checkbox"/>	Add	(GMT+00:00, DST auto) Europe/London

[Update selected](#) [Delete selected](#)

## Select an individual time zone

Now that these three predefined locations have been added, users will have the option to choose from them.

1. Head to **My Settings** by clicking on your profile image on the navigation bar.

The screenshot shows the Claromentis Administrator dashboard. The navigation bar at the top includes a search bar, a clock showing 10:24, and a profile icon. The profile icon is highlighted with a red box. A dropdown menu is open, showing options: 'View my profile', 'Edit my profile', 'My settings' (highlighted with a red box), and 'Log out'. The main content area includes a welcome message, a weather widget for Brighton, UK, and a calendar.

2. Head to the **Location & timezone** area.

People > My settings

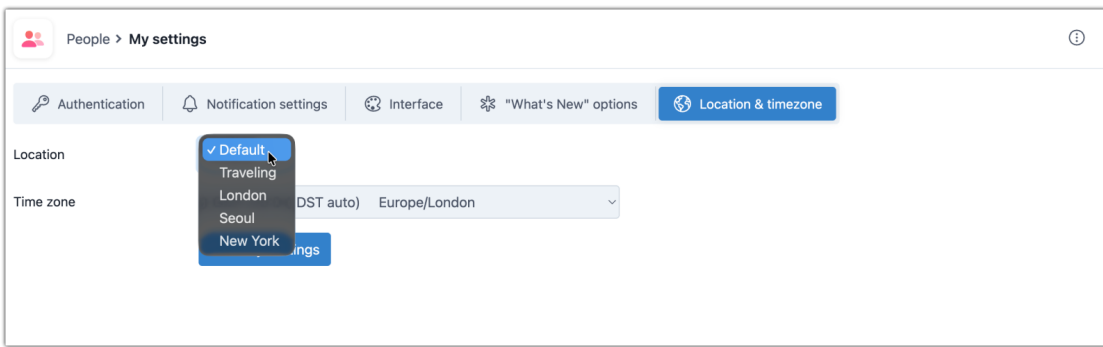

Authentication | Notification settings | Interface | "What's New" options | **Location & timezone**

Location: Default

Time zone: (GMT+00:00, DST auto) Europe/London

[Save My Settings](#)

3. Select the location from the pre-defined locations that are listed.

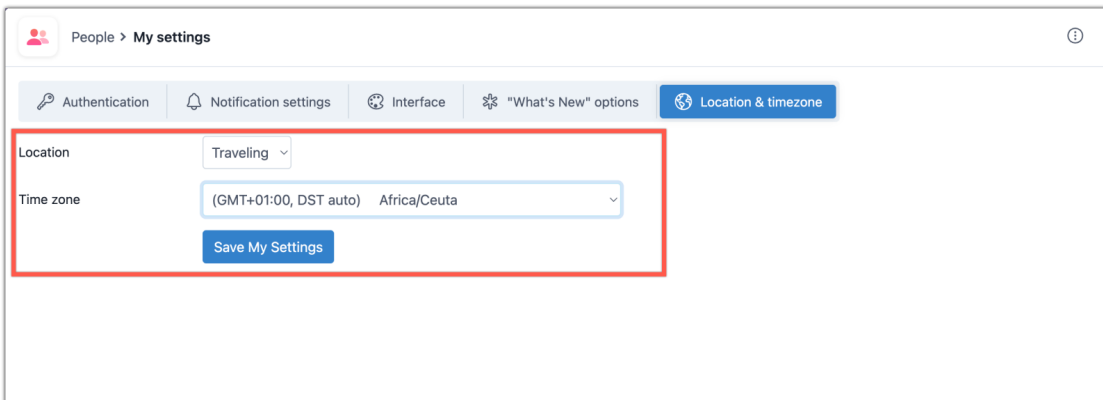

If a key timezone is missing, users should request for it to be added through their administrators or they can temporarily change their location and timezone which is explained in the next section.

## Temporarily change time zone for work trips or travel

The site does not auto-update based on the location; it requires being changed.

1. Navigate to **My settings > Location & timezone**.
2. Use the drop-down and select the **Travelling** option. This unlocks the timezone drop-down and means users can manually select the timezone they are located in.
