

Field Types Explained: Configure User Profile Fields

Introduction

From the Admin side of the People application you can create new user profile fields.

These fields can then be chosen to display in different areas of the Intranet or not, depending on your aims.

When adding a new user profile field there are various types available that are appropriate for certain types of data collection.

This guide will run through all types available and give an example of each can be used for to aid you in choosing the appropriate field for the outcome you desire.

Please note: You can choose to apply permissions to any of these fields to enable certain users/roles/groups to see them or update them. The ideas given for each field type in this guide are just examples of how they can be used without any permission restrictions. The most appropriate purpose for each which best suits your company will be up to you to decide upon and implement. Permissions can be applied to any fields you deem necessary to suit your best practices with employee information.

Getting started

Head to Applications > Admin > People > Configure user profile fields

A screenshot of the 'Admin / People Control Panel' interface. The top navigation bar includes 'Users', 'Power users', 'Roles', 'Groups', and 'Password policy'. Below this is a search bar with a 'Name:' label and a magnifying glass icon. A table lists user profiles with columns for Photo, Full name, Role, Group, Dummy User Account, Assigned, and Spare. The 'Configure user profile fields' option in the 'Configuration' sidebar is highlighted with a red box.

Photo	Full name	Role	Group	Dummy User Account	Assigned	Spare
	Abigail Clark	none	Human Resources, Company, Learning and Development	Yes	Yes	<input type="checkbox"/>
	Alan Metcalfe	none	Sales, Company	Yes	No	<input type="checkbox"/>
	Alison Kelly	none	Human Resources, Company	Yes	Yes	<input type="checkbox"/>
	Amelia Jackson	none	Human Resources, Company	Yes	Yes	<input type="checkbox"/>
	Anne Wilkins	Managers	Professional Services, Company	Yes	No	<input type="checkbox"/>

From this area (image below) you can see all the current user profile fields created in your Intranet (Green box)

You can change which of these appear in other sections of your site using the tabs on the right (Purple box)

Right now, we are going to add a whole new field so will be clicking on 'Add new field' button (Red Box)

Admin / People Control Panel / Configure user profile fields

Title	Key	Type	Special view permissions	Special edit permissions	Action
ID	id	int	No	No	
Account state	intranetuser	varchar	No	No	
Username	username	varchar	No	No	
Password hash	password	varchar	No	No

Add new field

Change field list and order for

- Main users list
- "View profile" page
- "Edit My profile" page
- Advanced search form
- Users list for people admin
- "Edit profile" page in admin area

Permissions

- Permissions for viewing fields
- Permissions for editing fields

Field Types

From the 'add new field' screen the type dropdown lists all fields available in Claromentis.

claromentis

Admin / People Control Panel / Configure user profile fields / Field properties

Title:

Key:

This Key is the metadata field's internal name used in searching and user import. Key should contain only letters, numbers and "."

Type: **String** (dropdown menu open)

Show as: Medium Textarea

Default value:

Repeatable

Visible even if no value

Mandatory

Display this field on

- "View profile" page
- "Edit My profile" page
- "Edit profile" page in admin area
- Main users list
- Users list for people admin
- Advanced search form

Field visibility: Standard Special Advanced

No permissions, usual field visible to everyone according to configuration.

String

- Long text
- Integer
- Checkbox
- Datetime
- Date
- Date (no year)
- Select (options)
- Multi-select
- Reference to document
- Hyperlink
- User select
- Indicator (text and image)
- File upload
- Image upload
- Address

Add new

Depending on the type that is selected different options will be given in the 'show as' field.

This denotes how the field will appear to the user when being filled in.

Optional aspects to consider if appropriate for your field:

Default Value - The information entered here will appear in your field on the front end before a user types anything in. This can be a helpful guide to show the user what kind of information they should be typing in.

Repeatable - Gives the option to add an extra field of the same configuration underneath the first instance on a profile. Up to 5 maximum for most fields types. Helpful if you wish to add multiple hyperlinks to a profile you can do so by repeating the field rather than creating a whole new one.

Visible even if no value - If selected your field will appear in the areas chosen even if nothing has been typed into it.

Mandatory - A red asterisk will appear next to this field and the user must fill it in otherwise they cannot save their profile page. Useful for important information you need every user to add and have on their profile.

Display this field on - You can choose any combination of Intranet areas listed that your field is going to show on by ticking the boxes.

For each field type listed in this guide there is an accompanying image (click to enlarge)

In each visualisation the numbers denote:

1. Configuration of field when in 'add new field area'
2. How field type appears to user filling it in on their profile
3. How field appears on user profile from the front end

- String

Used for text based inputs and likely the most commonly used field type on user profiles.

The options for showing this on the front end are as a single line, small text area or medium text area.

The one you select will depend on how much information you want/require the user to type into the field.

e.g. Use the string field to allow users to enter their own address.

This likely requires more than one line of data entry so you can set this to display as a medium text field giving the user more room to enter their details.

The screenshot shows a configuration page for a user profile field. The breadcrumb trail at the top reads: Admin / People Control Panel / Configure user profile fields / Field properties. The configuration form includes the following fields:

- Title:** Address
- Key:** address_text
- Type:** String (selected from a dropdown menu)
- Show as:** Medium Textarea (selected from a dropdown menu)
- Default value:** (empty text input field)

Below the 'Key' field, there is a note: "This Key is the metadata field's internal name used in searching and user import. Key should contain only letters, numbers and '_'."

Repeatable
 Visible even if no value
 Mandatory

Display this field on
 "View profile" page
 "Edit My profile" page
 "Edit profile" page in admin area
 Main users list
 Users list for people admin
 Advanced search form

Field visibility
 Standard Special Advanced
 No permissions, usual field visible to everyone according to configuration.

3

- Long text

This field type allows text based input that is best suited to fields that desire longer passages of text as answers.

The 'show as' options here are a small, medium or large text area dependant on how long you wish users responses to be.

e.g. Use the long text field to allow users to freely write about their career details or interests.

3

- Integer

This field type allows numerical characters to be entered only.

The sole option for display on the front end is for a single line of text input.

e.g. Use this field type to hold each users employee number

(You could also use a string type field to achieve this if special characters are required in the employee number and not strictly numerical values)

- Date time/Date/ Date (no year)

These three fields will all appear as date picker's on the front end so for this field type only images 2 & 3 will be given.

The granular configuration of each is slightly different based on what information they will require to be entered.

- Date time will ask the user to select a date but also enter a time e.g. when a qualification was gained (likely used in conjunction with another field above it)

The screenshot shows a form with several fields: 'Interests' (text area), 'LinkedIn' (text input with 'claromentis-ltd'), 'Twitter' (text input with 'claromentis'), and 'Certified date of qualification' (calendar icon and date input with '27-11-2019'). A time selection dropdown is open over the date field, showing options from 01:00 to 03:00 in 30-minute increments. A blue circle with the number '2' is next to the dropdown. Below the form is a purple 'Update My Profile' button. Below the button is a preview box labeled '3' showing 'Certified date of qualification' as '27-11-2019 02:00'.

- Date will ask the user to select a date and the year will also show on the front end e.g. use this to show a users start date at the company

The screenshot shows a form with several fields: 'Date of Birth' (calendar icon and date input), 'Interests' (text area), 'LinkedIn' (text input), 'Twitter' (text input), and 'Date Started' (calendar icon and date input). A calendar dropdown is open over the 'Date Started' field, showing the month of November 2019. A blue circle with the number '2' is next to the calendar. Below the form is a preview box labeled '3' showing 'Date Started' as '21 November 2019'.

- Date (no year) offers a date to be selected but the year will not show on the front end ever e.g. useful to log users birthdays but not reveal their age to other users

- Select (options)

This field type allows several answers to be entered in response to the field name prompt.

A user selects one of these which then appears on the front end.

The 'show as' options are for answers to display in a drop down or as radio buttons when a user is making their choice.

Regardless of the design option chosen the answer will appear in the same format on a user's profile from the front end.

e.g. Use this field type to confirm a users preferred contact method

3

- Reference to document

This field type offers a document picker for the user to select a file from the documents application which appears on their profile.

This only comes in one 'show as' form which is the picker box.

Once on a user profile from the front end, the blue 'I' when clicked will take the user to the document preview in the application and clicking the title will download the file.

Please note: if users don't have permissions to view the document it cannot be selected and any other user visiting the profile wont be able to download/see it without permissions either.

e.g. use this field type to attribute qualifications or certificates to a user's profile

1

3

- Indicator (text and image)

This field type can be used to allow a user to make a selection from 5 options to demonstrate their feeling on the given metric.

Text is accompanied by an image that allows the user to make an informed selection.

e.g. Use this field type for work satisfaction or rate the relationship with a partner/client.

Within Claromentis there are two default sets of text and images that will work to suit the two aims above, with

images of smileys and stars respectively.

The 'show as' options are as a select field or radio buttons.

Using radio buttons will ensure the image is displayed next to each option, whereas select is only text based.

You can use the text given below to enter into the 'values' field for:

Smileys

Poor,/images/satisfaction/poor.png

Low,/images/satisfaction/low.png

Medium,/images/satisfaction/med.png

High,/images/satisfaction/high.png

Max,/images/satisfaction/max.png

Stars

one,/images/star/1.png

two,/images/star/2.png

three,/images/star/3.png

four,/images/star/4.png

five,/images/star/5.png

3

- Address

This field type separates each part of an address (town/city, state/county, postcode/ZIP, country) into fields, which is called the 'show as' address input format.

This is an alternative field to use for addresses specifically.

You can use a string type field to allow addresses to be entered by users as outlined earlier in this guide.

e.g. Use this field for a users home address (rather than using a string field) or to add an additional business address
