

## Field Types Explained: Configure User Profile Fields

### Introduction

From the Admin side of the People application, you can [create new user profile fields](#).

These fields can then be chosen to display in different areas of the Intranet or not, depending on your aims.

When adding a new user profile field, there are various types available that are appropriate for certain types of data collection.

This guide will run through all types available and give an example of each that can be used to aid you in choosing the appropriate field for the outcome you desire.

**Please note:** You can choose to apply permissions to any of these fields to enable certain users/roles/groups to see them or update them. The ideas given for each field type in this guide are just examples of how they can be used without any permission restrictions. The most appropriate purpose for each, which best suits your company, will be up to you to decide upon and implement. Permissions can be applied to any fields you deem necessary to suit your best practices with employee information.

### Getting started

Head to Applications > Admin > People > Configure user profile fields

The screenshot shows the 'Admin > People Control Panel' interface. On the left sidebar, under 'CONFIGURATION', the 'Configure user profile fields' option is highlighted with a red box. The main content area displays 'User licences' with 'Licence limit' set to 'Unlimited', 'Active users' at 53, and 'Remaining users' as 'Unlimited'. Below this, 'Extranet user limit' is also 'Unlimited', with 'Active extranet users' at 7 and 'Remaining extranet users' as 'Unlimited'. A search bar and navigation tabs for 'Users', 'Power users', 'Roles', 'Groups', and 'Password policy' are visible. A table lists users with columns: Photo, Full name, Job Title, Role, Group, Extranet area, Last time login, and Royalty Percentage. The first user listed is Alan Metcalfe, Sales Assistant, with a last login of 17-04-2025 at 17:17. The second user is Alison Kelly, Human Resources, with a last login of 26-05-2020 at 15:45.

From this area (image below) you can see all the current user profile fields created in your Intranet (Green box)

You can change which of these appear in other sections of your site using the tabs on the right (Purple box)

Right now, we are going to add a whole new field, so will be clicking on the 'Add new field' button (Red Box)

Admin > People Control Panel > **Configure user profile fields**

### All user profile fields

Title	Key	Type	Special view permissions	Special edit permissions	Action
ID	id	int	No	No	[ ]

- "Edit profile" page in admin area

**PERMISSIONS**

- Permissions for viewing fields
- Permissions for editing fields

## Field Types

From the 'add new field' screen, the type dropdown lists all fields available in Claromentis.

Admin > People Control Panel > Configure user profile fields > **Field properties**

Title:

Key:   
This Key is the metadata field's internal name used in searching and user import. Key should contain only letters, numbers and "\_"

Type: **String** (dropdown menu open)

Show as:

Default value:

Display this field on:

Depending on the type that is selected different options will be given in the 'show as' field.

This denotes how the field will appear to the user when being filled in.

### Optional aspects to consider if appropriate for your field:

**Default Value** - The information entered here will appear in your field on the front end before a user types anything in. This can be a

helpful guide to show the user what kind of information they should be typing in.

**Repeatable** - Gives the option to add an extra field of the same configuration underneath the first instance on a profile. Up to 5 maximum for most field types. Helpful if you wish to add multiple hyperlinks to a profile, you can do so by repeating the field rather than creating a whole new one.

**Visible even if no value** - If selected, your field will appear in the areas chosen even if nothing has been typed into it.

**Mandatory** - A red asterisk will appear next to this field, and the user must fill it in otherwise they cannot save their profile page. Useful for important information that every user can add to their profile.

**Display this field on** - You can choose any combination of Intranet areas listed that your field is going to show on by ticking the boxes.

---

For each field type listed in this guide, there is an accompanying image (click to enlarge)

In each visualisation, the numbers denote:

1. Configuration of the field when in 'add new field area'
2. How the field type appears to the user filling it in on their profile
3. How the field appears on the user profile from the front end

### **- String**

Used for text based inputs and likely the most commonly used field type on user profiles.

The options for showing this on the front end are as a single line, a small text area or a medium text area.

The one you select will depend on how much information you want/require the user to type into the field.

e.g. Use the string field to allow users to enter their own address.

This likely requires more than one line of data entry so you can set this to display as a medium text field giving the user more room to enter their details.

**Endorsements**

No endorsements yet

**- Long text**

This field type allows text based input that is best suited to fields that desire longer passages of text as answers.

The 'show as' options here are a small, medium or large text area dependant on how long you wish users responses to be.

e.g. Use the long text field to allow users to freely write about their career details or interests.

1

Admin / People Control Panel / Configure user profile fields / Field properties

Title: Career details

Key: usr\_career

This Key is the metadata field's internal name used in searching and user import.

<b>Preferred contact method</b>	Email		
<b>LinkedIn</b>	claromentis-ltd		
<b>Twitter</b>	claromentis		

This field type allows numerical characters to be entered only.

The sole option for display on the front end is for a single line of text input.

e.g. Use this field type to hold each user's employee number

(You could also use a string type field to achieve this if special characters are required in the employee number and not strictly numerical values)

1

<b>Landline</b>	+44 0800 409 6101		
<b>Available for weekend work?</b>	Yes <b>3</b>		
<b>LinkedIn</b>	claromentis-ltd		
<b>Twitter</b>	claromentis		

### - Date time/Date/ Date (no year)

These three fields will all appear as date pickers on the front end, so for this field type, only images 2 & 3 will be given.

The granular configuration of each is slightly different based on what information they will require to be entered.

- Date time will ask the user to select a date, but also enter a time, e.g. when a qualification was gained (likely used in conjunction with another field above it)

The screenshot shows a form with several fields: 'Interests' (a text area with placeholder text), 'LinkedIn' (a text input with 'claromentis-ltd'), 'Twitter' (a text input with 'claromentis'), and 'Certified date of qualification' (a date and time picker). A dropdown menu is open over the 'Certified date of qualification' field, showing a list of times: 01:00, 01:30, 02:00 (highlighted), 02:30, and 03:00. A blue circle with the number '2' is next to the dropdown. Below the form, a blue circle with the number '3' is next to a preview box that displays 'Certified date of qualification 27-11-2019 02:00'. A purple button labeled 'Update My Profile' is at the bottom of the form.

- Date will ask the user to select a date, and the year will also show on the front end, e.g. use this to show a user's start date at the company

The screenshot shows a form with several fields: 'Date of Birth', 'Interests', 'LinkedIn', 'Twitter', and 'Date Started'. A calendar dropdown is open over the 'Date Started' field, showing the month of November 2019. The calendar grid has days of the week (Mo, Tu, We, Th, Fr, Sa, Su) and dates (28, 29, 30, 31, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 1, 2, 3, 4, 5, 6, 7, 8). A blue circle with the number '2' is next to the calendar. Below the form, a black circle with the number '3' is next to a preview box that displays 'Date Started 21 November 2019'.

- Date (no year) offers a date to be selected, but the year will not show on the front end ever, e.g. useful to log users' birthdays but not reveal their age to other users

The screenshot shows a user profile form with the following fields: Mobile, Interests, LinkedIn, Twitter, and Date of Birth. A date picker calendar is overlaid on the Date of Birth field, showing the month of February. The calendar has a grid with days of the week (Mo, Tu, We, Th, Fr, Sa, Su) and dates (31, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 7, 8, 9, 10, 11, 12, 13). A green circle with the number '2' is positioned over the date picker. The Date of Birth field is highlighted with a blue border.

3

Date of Birth 7 Nov

### - **Select (options)**

This field type allows several answers to be entered in response to the field name prompt.

A user selects one of these, which then appears on the front end.

The 'show as' options are for answers to display in a drop-down or as radio buttons when a user is making their choice.

Regardless of the design option chosen, the answer will appear in the same format on a user's profile from the front end.

e.g. Use this field type to confirm a user's preferred contact method

1

### - Multi-select (options)

This field type allows several answers to be entered in response to the field name prompt (as with the select field above)

However, with this field type, the user can select multiple responses to appear on the front end.

The 'show as' options are for answers to display in a list (multi-select) or as checkboxes.

Regardless of the design option chosen, the answers will appear in the same format on a user's profile from the front end.

e.g. Use this field type to confirm which locations a user is available to work at

### - Reference to document

This field type offers a document picker for the user to select a file from the documents application, which appears on their profile.

This only comes in one 'show as' form, which is the picker box.

Once on a user profile from the front end, the blue 'i' when clicked will take the user to the document preview in the application and clicking the title will download the file.

Please note: if users don't have permissions to view the document, it cannot be selected, and any other user visiting the profile won't be able to download/see it without permissions either.

e.g. use this field type to attribute qualifications or certificates to a user's profile

### - Indicator (text and image)

This field type can be used to allow a user to make a selection from 5 options to demonstrate their feeling on the given metric.

Text is accompanied by an image that allows the user to make an informed selection.

e.g. Use this field type for work satisfaction or rate the relationship with a partner/client.

Within Claromentis, there are two default sets of text and images that will work to suit the two aims above, with images of smileys and stars, respectively.

The 'show as' options are as a select field or radio buttons.

Using radio buttons will ensure the image is displayed next to each option, whereas select is only text-based.

You can use the text given below to enter into the 'values' field for:

#### Smileys

Poor, /images/satisfaction/poor.png

Low, /images/satisfaction/low.png

Medium, /images/satisfaction/med.png

High, /images/satisfaction/high.png

Max, /images/satisfaction/max.png

#### Stars

one, /images/star/1.png

two, /images/star/2.png

three, /images/star/3.png

four, /images/star/4.png

five, /images/star/5.png

My furry friend

3

## - Address

This field type separates each part of an address (town/city, state/county, postcode/ZIP, country) into fields, which is called the 'show as' address input format.

This is an alternative field to use for addresses specifically.

You can use a string type field to allow addresses to be entered by users, as outlined earlier in this guide.

e.g. Use this field for a user's home address (rather than using a string field) or to add business address

1

[Admin](#) / [People Control Panel](#) / [Configure user profile fields](#) / Field properties

Title

Key

This Key is the metadata field's internal name used in searching and user import.  
Key should contain only letters, numbers and "\_"

Type

Show as

Default value

- Repeatable
- Visible even if no value
- Mandatory

- Display this field on
- "View profile" page
  - "Edit My profile" page
  - "Edit profile" page in admin area
  - Main users list
  - Users list for people admin
  - Advanced search form

Field visibility  Standard  Special  Advanced
