

# LibreOffice

The Document Foundation

## Updating LibreOffice

### Prerequisites

- Download the version of LibreOffice desired (e.g. [https://www.libreoffice.org/donate/dl/win-x86\\_64/6.2.2/en-US/LibreOffice\\_6.2.2\\_Win\\_x64.msi](https://www.libreoffice.org/donate/dl/win-x86_64/6.2.2/en-US/LibreOffice_6.2.2_Win_x64.msi))
- Ensure that the /Claromentis/software/LibreOffice folder path exists.

### Steps

- Uninstall & remove the current version of LibreOffice
- Run the install and make sure it is placed in the same location (/Claromentis/software/LibreOffice)
- In the C:\Claromentis\document\_converter directory edit the services.conf and ensure that it references the location of LibreOffice correctly.

```
CONVERTER_OO_HOME=C:/Claromentis/Software/LibreOffice
```

- Following the upgrade/re-install of Libreoffice, check that the 'Claromentis Java' service is still running as the service relies on the Path being correct in the services.conf file.
