

The Search Application

Global search can be a handy tool for users to quickly locate relevant files and areas of the site they need.

This article covers how site search works and how it can be configured.

Global search is found in the top banner of the page:

A screenshot of the Claromentis website home page. The top navigation bar is purple and contains the Claromentis logo, a search bar with the text "What are you looking for?", and several icons including a clock, a calendar, a mail icon, a book icon, a grid icon, a bell icon, and a user profile icon. Below the navigation bar, the main content area is white. On the left, there is a "Good Evening Claromentis Administrator" message with a welcome note. In the center, there is a "New: Polls & Surveys application" announcement. On the right, there are two cards: "Book a personal demo" and "Pricing". Below these, there is a calendar for August and a poll titled "Office or Home?".

M	T	W	T	F	S	S
27	28	29	30	31	1	2
3	4	5	6	7	8	9
10	11	12	13	14	15	16
17	18	19	20	21	22	23

Poll

Office or Home?

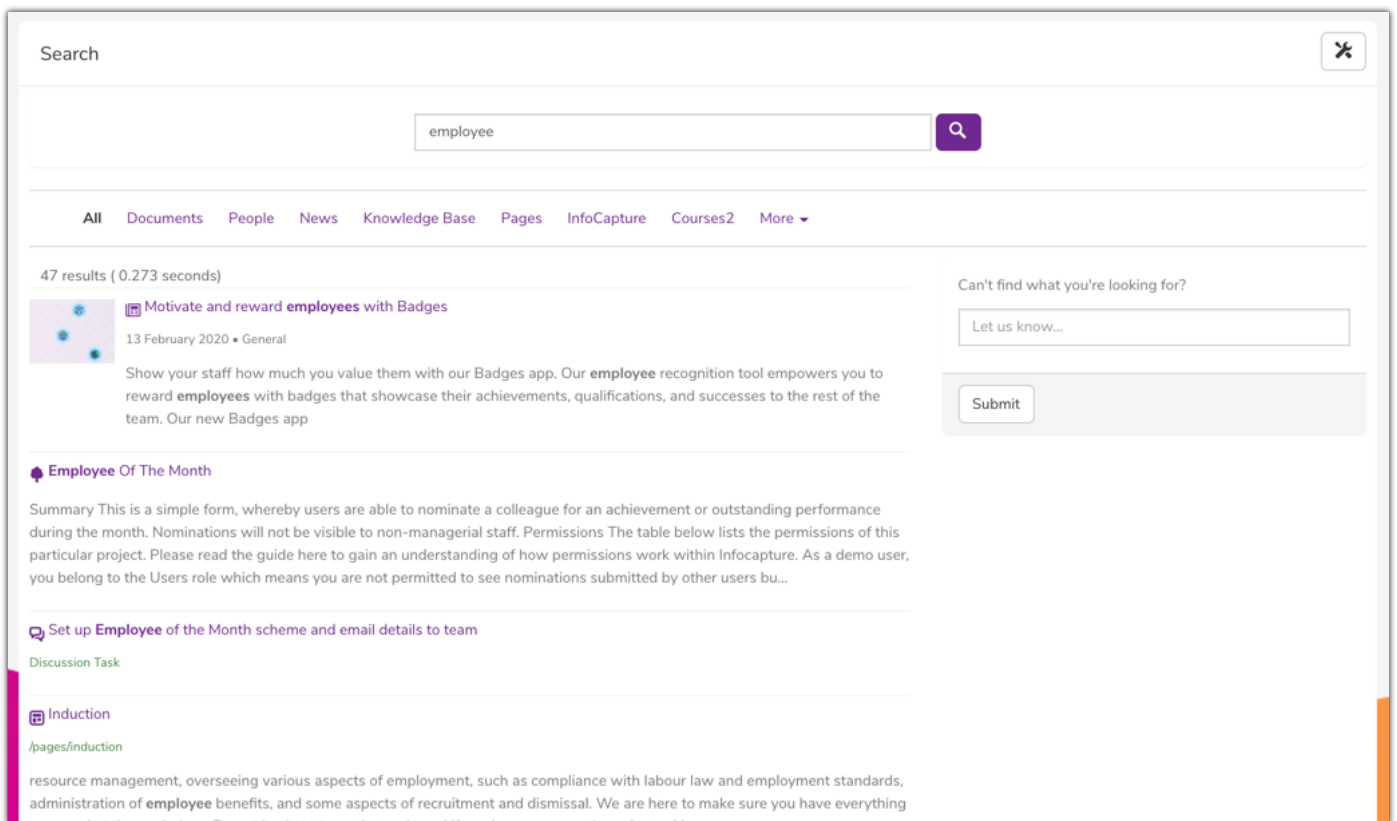

Once the pandemic is behind us, what would be your ideal working arrangement?

Results so far:

Working from home permanently

When a search is run, you will see a screen similar to the below image. The most relevant results are listed first, and you can use the application headings to narrow your search to within these areas.

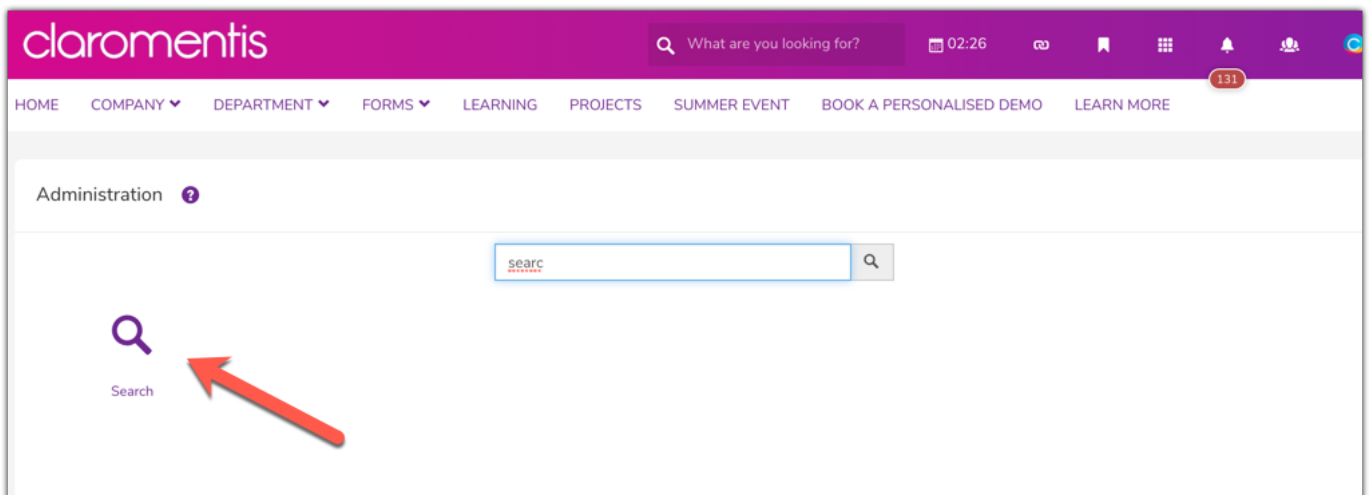

You will also see a box on the right for when users are unable to find what they are looking for, this is to alert admins of this.

The search results will show the most relevant results containing that word or search terms.

Search also has a dedicated application so site admins can adjust and configure the search to be more effective.

Search recommendations

Creating search recommendations help users to find content within the intranet. You are able to set up key phrases and words that, when users type these in, will return certain content.

There is a full guide on adding recommendations [here](#).

KB_question	<input type="checkbox"/> Recreate mapping	<input type="checkbox"/> Reindex

Note

Reindexing your data needs careful consideration and planning as your store size can vary the time it takes to complete.

If you wish to clear all your indexes then select 'Recreate the index and all mappings'. This will delete all indexes from the database so that the entire system would then need reindexing.

If you wish to reindex a specific application then select the appropriate option and press 'Start'.

Once you receive a message saying that reindexing is in progress, navigate to the Indexing Service page to monitor progress.

Empty search results

Here you can get a feel for what people are searching for and if it is producing no results.

If users are regularly using search to find the same sort of items, for example, a specific documents folder or certain key policies, you could set up fast access buttons to these areas on the homepage instead - instructions on this can be found [here](#).
