

Buttons: Admin overview

Archived

The admin side of Buttons is very simple.

An application administrator can navigate to **Admin > Buttons**

Any user(s) added to this permissions box will be able to manage (i.e. add/remove) buttons.

A screenshot of the Buttons Admin interface. The top navigation bar shows 'Admin / Buttons'. On the left, there is a sidebar with a 'Permissions' tab. The main content area is titled 'Permissions' and contains the instruction 'Specify who has rights to manage buttons'. Below this is a search bar with the placeholder text 'Start typing to add...'. To the right of the search bar are 'Browse' and 'Remove' buttons. Below the search bar, a list of roles and users is displayed: 'Role: Administrators' and 'User: Playground Admin'. Below the list is a link 'View matching users...'. At the bottom of the main content area is a blue button labeled 'Apply permissions'.

Generally, only administrators will be given the ability to create and manage Buttons, however, if you have the sort of Company environment where users can be trusted to make these and share with others there is the option to do this by giving more users this ability.

Those who have been given permission to manage buttons can also assign permissions from the front end of the application with an already existing button or when creating a new button.

Please note: Permissions in this area is solely based on whether the button will be visible to the user(s). In other words, they will not be able to manage the button (i.e. edit/delete). In order to manage buttons, they will have to be given permission from the admin side.

Users with 'view' permissions will be able to see those Buttons, but make sure they also have permissions to the Pages where they have been placed!
