

## Introduction to the Documents Application

A folder directory structure is the organisation of an operating system's files and how this is displayed to a user.

Files are typically laid out in a hierarchical structure.

In Claromentis there is no limit to how many folders or subfolders can be created or how many files can be uploaded.

This is restricted only by the amount of space on your server.

If your system is hosted by us you will have 100GB of free storage from installation, so please [contact us](#) if you would like to purchase more.

The index below offers more information on how to use the application. If you run into any issues or have a product functionality question, please submit a [support ticket](#) so our team can assist.

## Documents application literature index

These guides are intended for site administrators - those who will advise end-users on how to use the application as well as manage the whole directory.

It is recommended to start at the top and read through in order.

## Further Learning

We have an e-Learning course available [here](#) on Discover that covers the documents application in detail and would suit new administrators or those looking for a refresher.
