

Learning asset types

Introduction

In Claromentis, there are several methods to get E-Learning content onto the Intranet also known as Asset Types.

These can be especially useful when you want to use specific asset types for certain e-learning content as they offer different attributes. The available types are as follows:

- [File Upload](#)
- [URL](#)
- [Quiz](#)
- [SCORM 1.2 package \(zip\)](#)
- [Embed Code](#)
- [Inner File](#)

To learn more about how to create new Courses & Modules, visit our article [here](#).

File upload type

Selecting 'File upload' means choosing a file from your personal computer to upload to a module. This option allows you to attach files, such as PDFs, Word docs, and other common file types.

File size limits apply here just like in other Intranet areas e.g. Documents, as standard this is 80MB.

You can easily upload files from your PC by (a) clicking the Choose File option...

Learning Material

Type ☒ File Upload ☐ URL ☐ Quiz ☐ SCORM 1.2 package (zip) ☐ Embed Code ☐ Inner File

Upload file * or select from pre-uploaded...

Message to display for Users with view rights but no access rights

... or (b) by simply using the drag-and-drop feature to upload the existing file.

Learning Material

Type ☒ File Upload ☐ URL ☐ Quiz ☐ SCORM 1.2 package (zip) ☐ Embed Code ☐ Inner File

Upload file * or select from pre-uploaded...

Message to display for Users with view rights but no access rights

Status ☒ Draft ☐ Live ☐ Archived

Once uploaded, this will present front-end users with a link to download a copy of the content and mark completion.

Reminder: Users will have to check the completion box from within Claromentis for the completion to be recorded. Completing a course/module outside of Claromentis will not be logged within the intranet.

Quiz type

The 'Quiz' method allows you to select an existing from the Quiz application of your Intranet. You can use the picker to select the relevant quiz.
