2. The key step will now be to define the **Default Value**. The default value should be set with an expression that corresponds to the people field.

You can manually enter the expression or simply use the menu drop-down to select the relevant field.

☒ {user:id}

☐ {user:intranetuser}

☐ {user:username}

☐ {user:password}

☐ {user:firstname}

☐ {user:surname}

☐ {user:user\_code}

☐ {user:company}

☐ {user:job\_title}

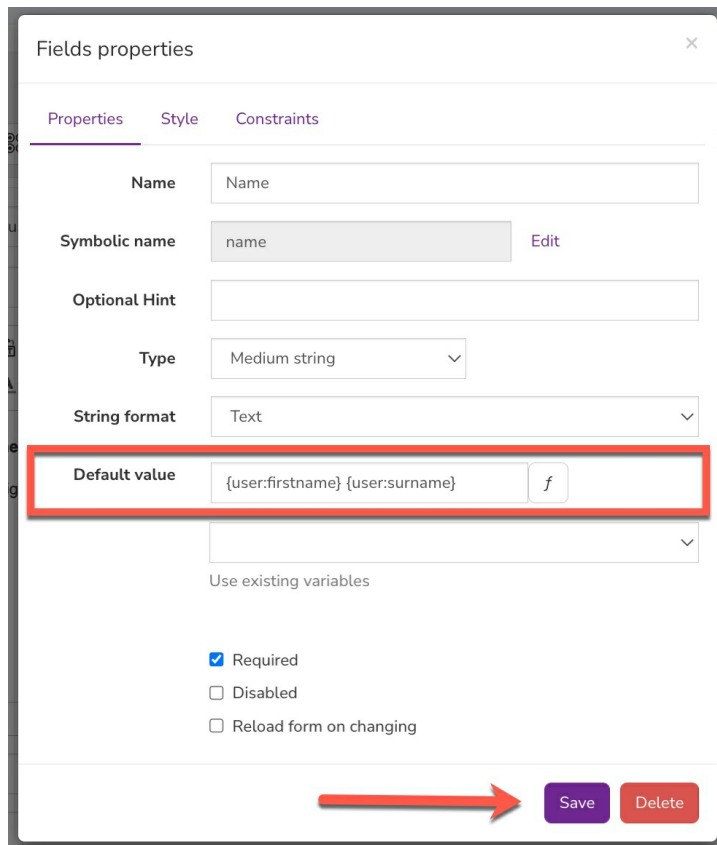

☐ {user:emailad}

[Save](#) [Delete](#)

**Please note:** If the expression is missing from the drop-down list, head back to the People application to ensure the field is configured correctly and selectable as an option.

3. Once the expressions have been defined, select **Save** to apply this to your field.

In this example, expressions for First name & Surname have been selected.

The screenshot shows the 'Fields properties' dialog box with the 'Properties' tab selected. The 'Default value' field is highlighted with a red rectangle and contains the expression '{user:firstname} {user:surname}'. A red arrow points to the 'Save' button at the bottom right.

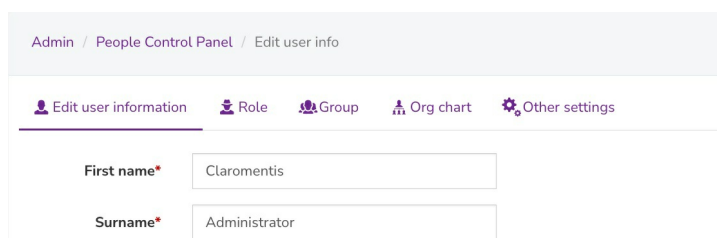

To further prevent users from making errors and ensure the information pulling through is from user profiles only, you can set the field to 'Disabled.' When submitting a ticket, the field will be greyed out and uneditable, but the information from the profile will be visible.

## Submitting tickets

Once the field has been applied, users with permissions can submit tickets as usual.

When tickets are submitted, the field will auto-populate with the user's first name & surname as entered in their profile.

### User-profile:

The screenshot shows the 'Edit user info' page. The 'First name' field contains 'Claromentis' and the 'Surname' field contains 'Administrator'.

### IC ticket:

[Ticket](#)[Jump](#)

\* - required fields

**Name\***

Claromentis Administrator

**Please note:** If user information does not populate, head back to the People application to ensure the field is not empty in user-profiles and information is available in the field.

## Date field

Use the built-in option that appears against 'Date' type fields to auto-populate the current date when a ticket is being filled out:
