

To ensure users get to the new page you may want to set up an automatic redirection on the existing Publish pages that leads to the new one.

- Permission to edit existing Publish pages.
- Relative URL of the new Pages page.

2. Go to **Source** mode

```
<script>
setTimeout(function () {
    window.open('/pages/yourpagehere', '_self');
}, 5000);
</script>

<div class="alert alert-info">You will be redirected to the new page in 5 seconds.</div>
```

4. Replace `/pages/yourpagehere` with the relative URL of your Pages page.

FAQs

How can I find the relative URL of the Pages page?

This is the URL in the address bar without the domain, starting with '/pages'

Can we change the time delay?

You can change the delay by replacing the number of milliseconds. **5000** . By default, it is a 5 seconds delay.

Please be advised changing this to zero (without delay) means the Publish page cannot be edited, as you will be instantly redirected every time you open the page. This cannot be reversed without intervention from the Claromentis team.

Can we set it so that it opens in a new window/tab?

You can replace **_self** it with **_blank** if you wish to have redirection open in a new tab.
