

Add Custom links to the Application List

As a Menu Builder application administrator, you can add your own links to the [application list](#).

1. Navigate to **Admin > Menu Builder > Applications** and click **Add new link**.

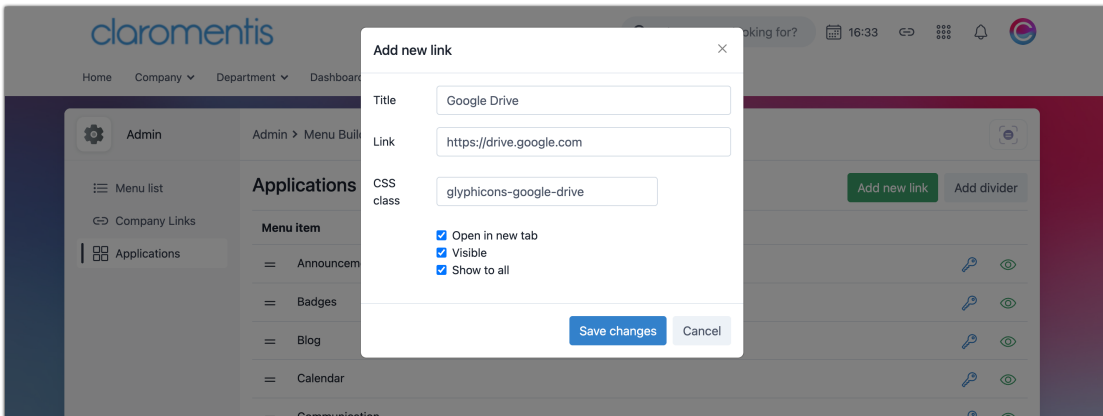

2. Fill out the fields in the pop-up for your custom link.

- **Title:** Enter the name for the new link
- **Link:** Specify the URL to open when the custom link is clicked
- **CSS Class:** Specify the name of the icon you want to appear as this link (reference in **Admin > System > Labs > Glyphicons finder**)

- **Open in New tab:** When clicked, the link will open in a new tab
- **Visible:** Toggle whether the link appears in the list or not
- **Show to all:** Select this if you want 'All registered' to be put into the permissions for the item. Deselect if you want to add custom permissions for Users, Roles, or Groups.

e.g. for Google Drive

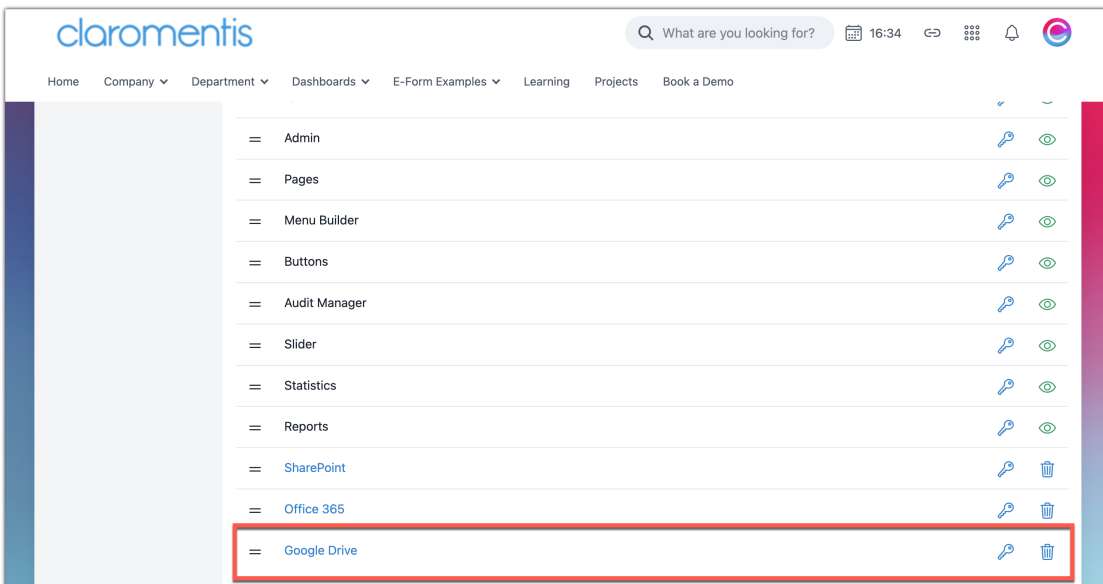

- Title: **Google Drive**
- Link: **https://drive.google.com**
- CSS class: **glyphicons-google-drive**

3. When ready, click **Save Changes** to apply and create the link.

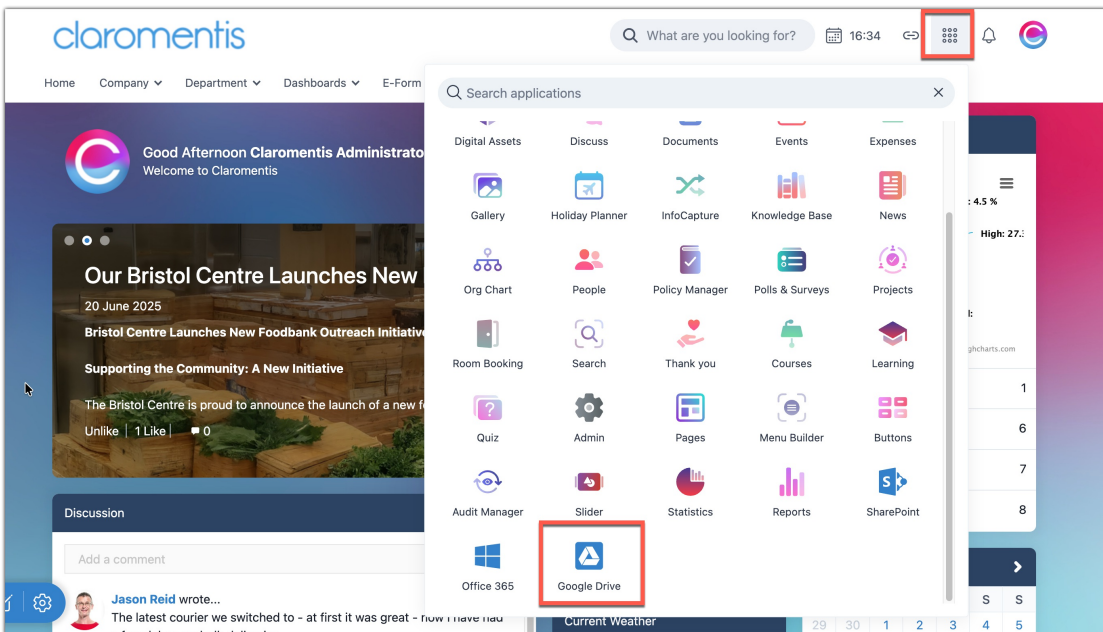

4. If **Show To All** was deselected, you will be taken to the permissions area to set permissions and save them.

If **Show To All** was selected, then 'All registered' has been entered against the custom link automatically, and you will be returned to the application list configuration area.

5. The new link has been created and can be re-ordered within the list if required.

6. Test the icon appears in the application list as expected.

Glyphicons reference

Use the titles below to set against your custom links and have that icon appear.

- .glyphicons-glass
- .glyphicons-leaf
- .glyphicons-dog
