SendGrid Integration

ℹ This feature is only available from Claromentis 8.13.17

What is SendGrid?

Twilio SendGrid is a cloud-based email service with many features including reporting and API.
Claromentis uses SendGrid by default to deliver system emails from our SAAS (Software As A Service) infrastructure for many customers as part of the basic offering.

However, there are certain limits to what information we can share with individual customers.

https://sendgrid.com

What's the benefit of your own Integration.?

Having your own dedicated account with SendGrid allows you to access advanced features such as reporting and troubleshooting dedicated to you from the SendGrid portal.

Is there an additional cost?

Having your own account means you are signing up to your own API plan with SendGrid directly and you can find pricing information here.

How can I Integrate?

1. Sign up for an account via

https://signup.sendgrid.com/

There is a free account to try out with some limitations.

2. Create an API Key with at least "Mail" Permission

https://app.sendgrid.com/settings/api_keys

3. Set Mail Integration in Claromentis

⚠ WARNING! Please consult with one of our Support Team Prior to making these changes as you won't be able to restore the default configuration. This configuration affects all outgoing email messages from Claromentis. Changes to configuration take effect immediately.

Navigate to Admin > System > Mail

Set the server type: **SMTP**

Host: **smtp.sendgrid.net**

Port: **587**

Use authentication: **Yes**

Username: [**paste the API Key Name**]

Password: [**paste the API Key Password**]

Localhost: **localhost**
