

Embedding Social Media

Embedding social media posts and feeds using the embed component can enhance user engagement, extend reach, and drive traffic. In this article, we will outline how to embed social media elements onto your page. You will need to start with the relevant social media accounts as they will likely require authentication to access the content.

Start by adding the embed component to the page and selecting the code option and following the steps below based on what platform you are trying to embed.

Facebook

Instagram

Twitter

Linkedin

Facebook

Step 1:

Go to

Facebook Page Plugin

Please note: You can only embed feeds from Facebook Pages, such as company or organisation pages on Facebook and not your personal feed.

Step 2:

Enter the Facebook Page URL you wish to embed, see example below.

Width: 280 if you wish to fit the embed into a single column.

Facebook Page URL	tabs
<input type="text" value="https://www.facebook.com/claromentis/"/>	<input type="text" value="timeline"/>
Width	Height
<input type="text" value="280"/>	<input type="text" value="The pixel height of the embed (Min. 70)"/>
<input checked="" type="checkbox"/> Use Small Header	<input checked="" type="checkbox"/> Adapt to plugin container width
<input type="checkbox"/> Hide Cover Photo	<input checked="" type="checkbox"/> Show Friend's Faces

What if I can't see the preview?

Please make sure the Page doesn't have any restriction at all. For example **age** or **location** restriction.

On Facebook Page, navigate to **Settings** and check the restriction as shown below

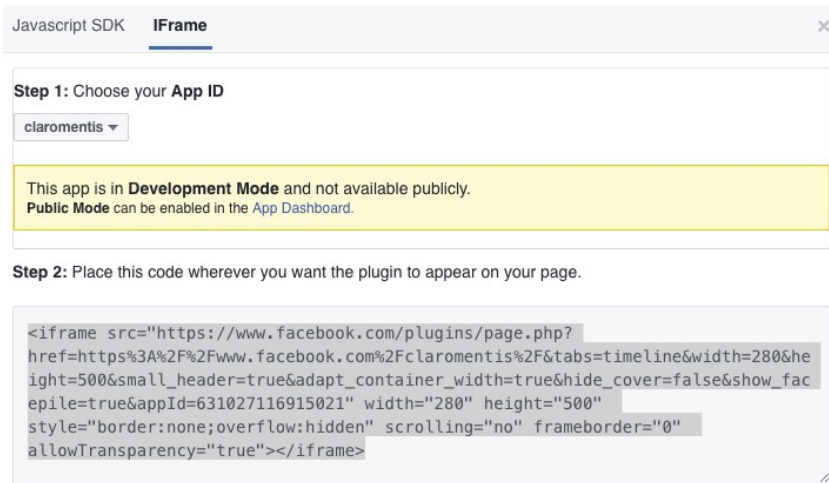

After removing your page restriction, please retry to re-enter the URL in the plug-in and you should now be able to see the preview and generate code.

Step 3:

Click **Get the code**

Choose **IFrame** Tab and select App ID, if you don't have App ID you may have to [Create an App ID](#) first with your Facebook Account.

Step 4:

Copy the code and paste it into your embed component.

Instagram

(A whole feed cannot be displayed as the Instagram policy does not allow this; to get multiple posts on an Intranet page you will need to use multiple embed components)

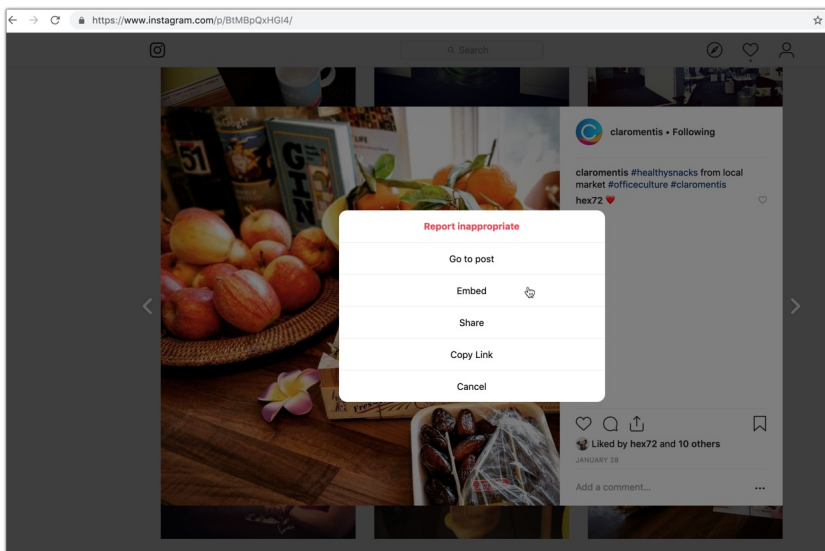

Please note: The account must be public in order to display the image in the component. If the account is private only a link to Instagram will display. When followed it will ask you to log in.

Step 1:

Navigate to the URL of the Instagram post you wish to embed on your page. Click on "More" (3 small dots on the bottom right-hand side of the post) as shown below.

A pop-up list will appear, select Embed from this.

Step 2:

As shown below, another pop-up will appear with the code you need.

- Copy this code and navigate to the page on your Claromentis site you wish to display it on.
- You can deselect the "Include caption" check box if you do not wish for the post's caption to be seen on your page once embedded.

Step 3:

Paste the copied code into your embed component.

Twitter

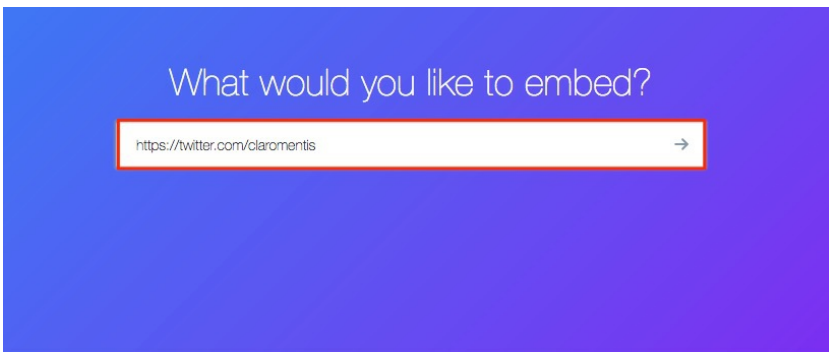

Currently, Twitter is not allowing embedded content to be viewed without logging in first. This is not something Claromentis can control. Hopefully, Twitter will decide to reverse this decision in the future so tweets are visible.

Step 1:

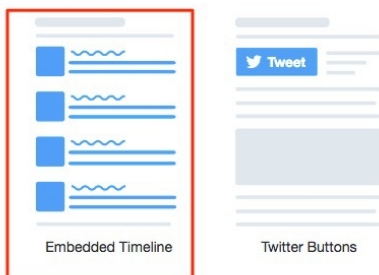

Go to

<https://publish.twitter.com/>

Enter Twitter URL you wish to embed for example <https://twitter.com/claromentis> and select Embedded Timeline.

Here are your display options

Step 2:

Copy the code by clicking the "Copy Code" button

Step 3:

Paste the copied code into your embed component.

Linkedin

(A whole feed cannot be displayed as the LinkedIn policy does not allow this; to get multiple posts on an Intranet page you will need to use multiple embed components)

Step 1:

Navigate to the post you want to embed.

Step 2:

Click the More icon in the top right corner of the post. and then click Embed this post.

Step 3:

Click **Copy code** from the pop-up window that appears.

You'll receive a notification in the bottom left corner of your screen telling you that the code has been copied to your clipboard.

The screenshot shows the LinkedIn 'Embed this post' dialog box. At the top, it says 'Embed this post' with a close button. Below that, it instructs the user to 'Copy and paste embed code on your site'. A text box contains the following HTML code: `<iframe src="https://www.linkedin.com/embed/feed/update/urn:li:share:7086999567031787520" height="780" width="504" frameborder="0" allowfullscreen="" title="Embedded post"></iframe>`. A 'Copy code' button is located to the right of the code box. Below the code, it states: 'By copying the link above, you agree to the [LinkedIn Embed Terms of Use](#).' A 'Preview' section shows a post from 'Claromentis Ltd' with 1,048 followers, posted 6 days ago. The post content reads: 'Attention all business owners! 📌 Want to boost employee engagement, productivity, and personal development? The key is creating an online community where your staff feels heard and supported.'

Embed code copied to clipboard.

Step 4:

Paste the copied code into your embed component.
