

Pages: Admin overview

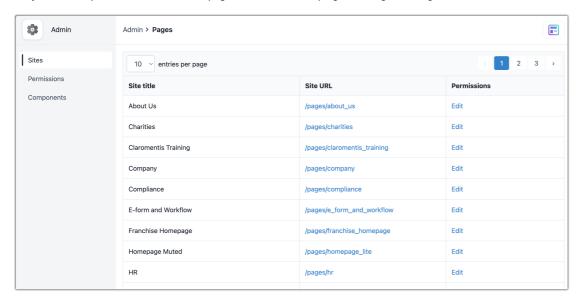

This guide is for application administrators of the Pages application.

We will cover each tab available on the admin side of the Pages application. (Admin > Pages)

Sites

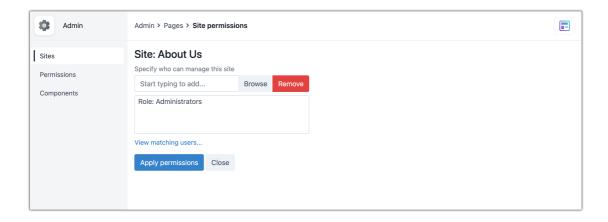

Once Sites have been created, they will be listed here.

They will be in alphabetical order; use the page numbers on the top right to navigate through.

Click the site URL to open its homepage.

Otherwise, the 'edit' button allows the 'Manage' site permission to be edited for the corresponding Site

This is a way for administrators to quickly update this permission without needing front-end permissions to access the same area.

Permissions

Set who can create Sites (and therefore pages) as well as deal with any content added to the trashcan.

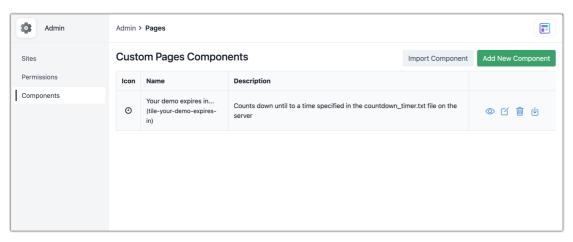

Administrators need to set up this area before Sites & Pages can be created.

Components

It is possible to create custom page components if you have the proper technical knowledge to do so.

We have some free examples that we manage - Snowfall, Quotes

Once created or imported, the components are listed in this tab for administrators to manage.

Custom components (outside our free examples) are created & managed client-side.

If you would like assistance building a custom component, please submit achange request.
