

Discuss: Front-end overview

The Discuss application is a great tool for team and company collaboration. Admins can create discussion topics that are public or private for selected individuals or teams where conversation whether formal or informal can take place.

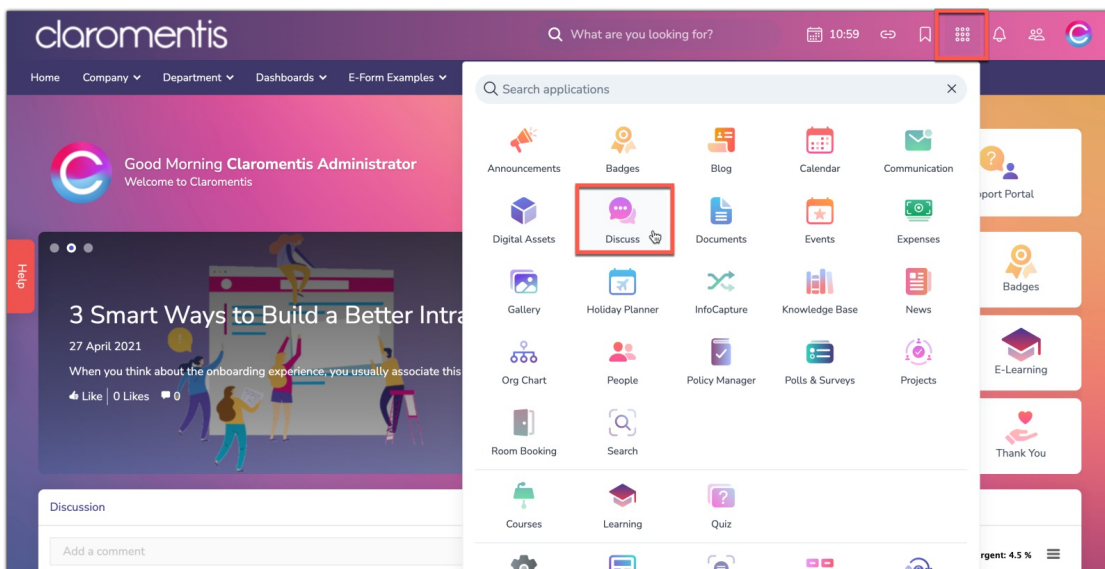

Share links, images, events and tasks to customise each Topic for different use cases.

It is also possible to place discussions on pages using the Discuss component. This way users can quickly see the latest comments and contribute with ease without having to open the application directly.

For all available permissions & configuration options, make sure to read our [Discuss: Admin Overview](#).

Front-end of discuss

Head to **Application > Discuss**:

All topics and categories a user has permission to view will be listed:

Tabs on the left can be used to filter by:

- **Pinned:** Discussion topics that have been pinned/saved to the top of the list to highlight key topics.
- **Hot Topics:** Discussion topics that received 10 new posts in the last 10 days. This is to indicate the current trending topics to encourage further engagement.
- **Archived:** Discussion topics that have been archived and are no longer in use.

Creating discussion topics

With the correct permissions, you will see the option to create a discussion topic.

Reminder: If you do not see the option, please check with your administrator that you have the permission needed to do so.

For more information, please refer to our guide on [How to Create a Discussion](#).

Jason Reid wrote...

@Dan Butler having a cat on your lap helps! Also, plants. Lots of them!

Big thank you to everyone who donated and brought in cakes today. Leftovers are in the staff room, but be quick! 🍰

Uploaded just now by Claramentis Administrator.

Links

Any hyperlinks used in posts or replies will be listed under this tab.

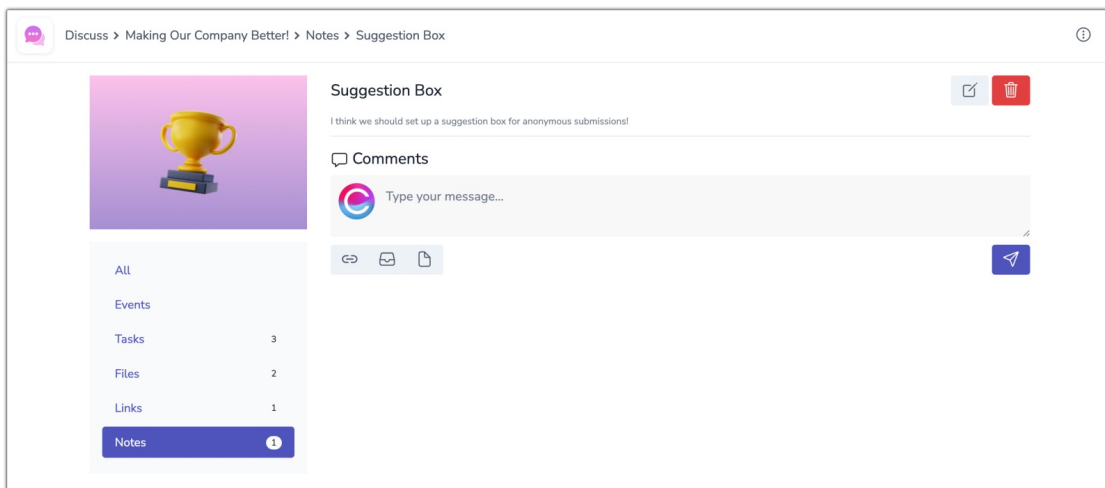

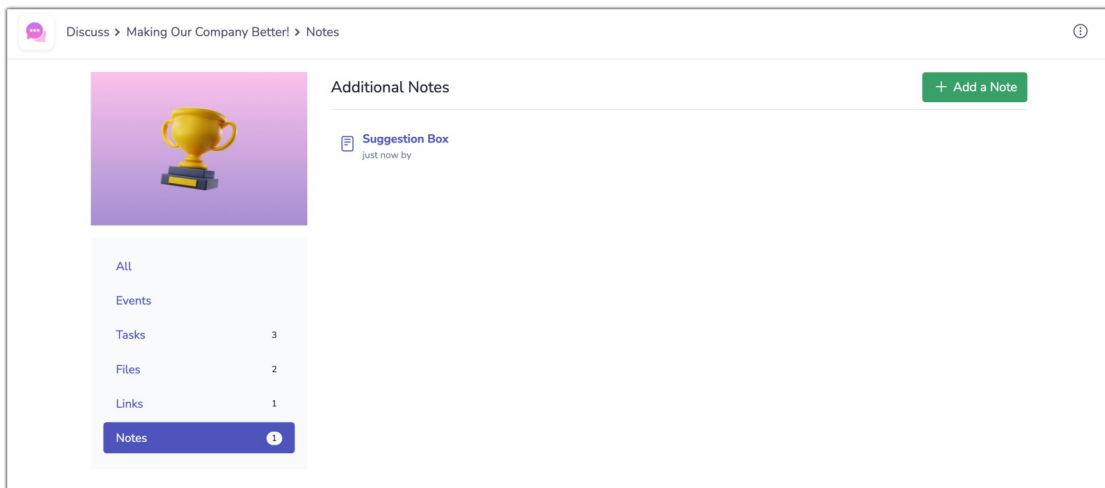

As with files, the links can only be added/removed to the tab from the posts/comments they were made in.

Notes

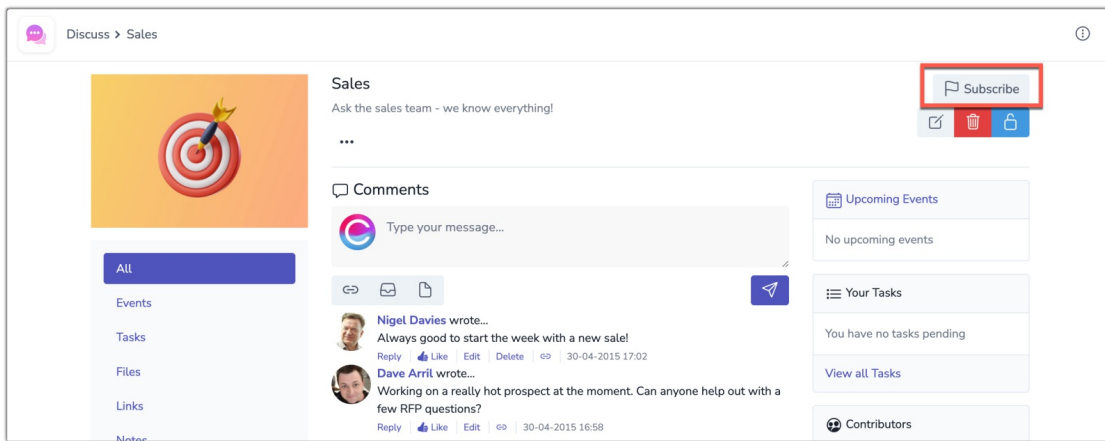

Notes that have been added to the discussion topic will be listed.

More notes can be created using the **+ Add a Note** option.

Subscribing to topics

Users can subscribe to a Topic at any time using the flag icon:

When subscribed a notification will be generated for every change or post made in the Topic.

An administrator can blanket subscribe to everyone at the point of [Discussion creation](#):

Permissions

Start typing to add... Browse Remove

All registered

☒ Contribute
☒ Edit
☐ Admin (edit discussions & posts)
[View effective permissions...](#)

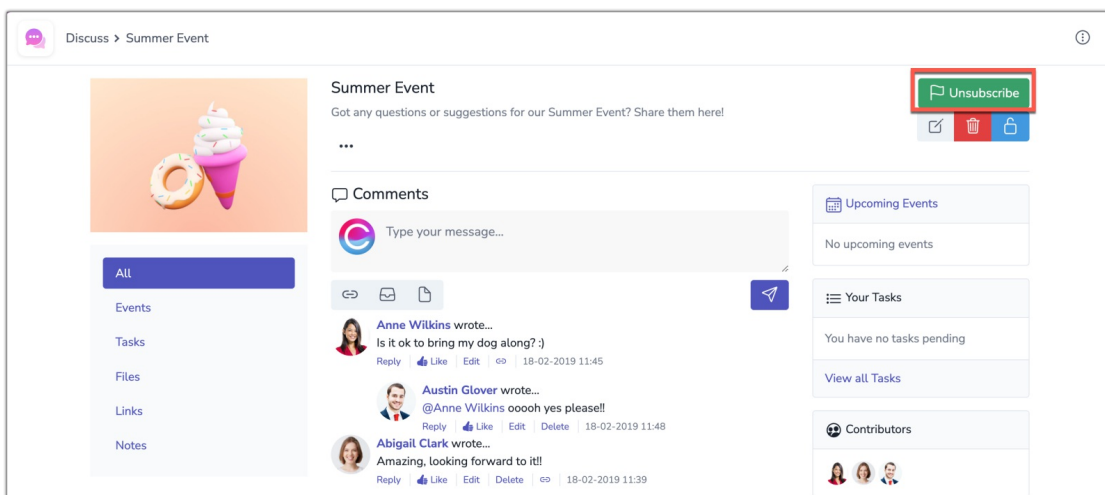

Subscription ☒ Subscribe anyone with 'Contribute' permission (users will be able to unsubscribe to stop notifications)

Notifications ☐ Send a notification to Users who can view this Discussion

You can include (optional) Notification content here.

Create Discussion Cancel

If this is used, each user still can unsubscribe themselves at any time using the flag:

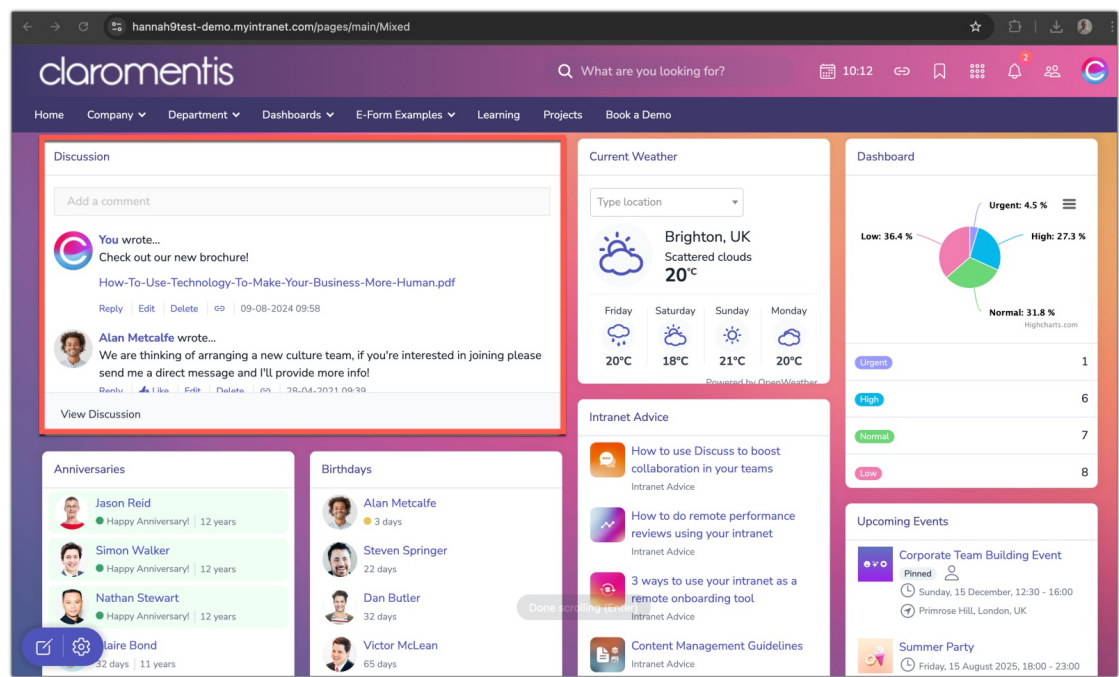

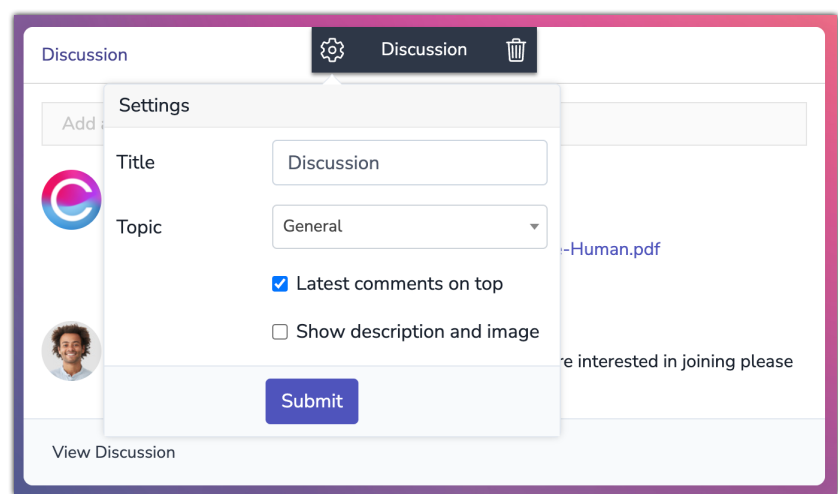

Please note: The Subscribe users option is only available when creating the discussion topic and cannot be used after the topic has been created. If needed, you can use the 'Send a notification to Users who can view this Discussion' option as an alternative option to trigger a one-time notification.

Discuss component

Topics can be added to a page using either the Discussion component or the Discussion List component.

The **Discussion** component allows you to display a single topic on a page, and users can add posts directly into it without needing to go to the Discuss application directly:

The **Discussion List** component allows you to display a list of topics within a page for the user to click on and open in the application:
