

Editing Notification Templates

Notification templates use **Twig formatting**, so any drastic changes by [sysadmins](#) must adhere to these rules.

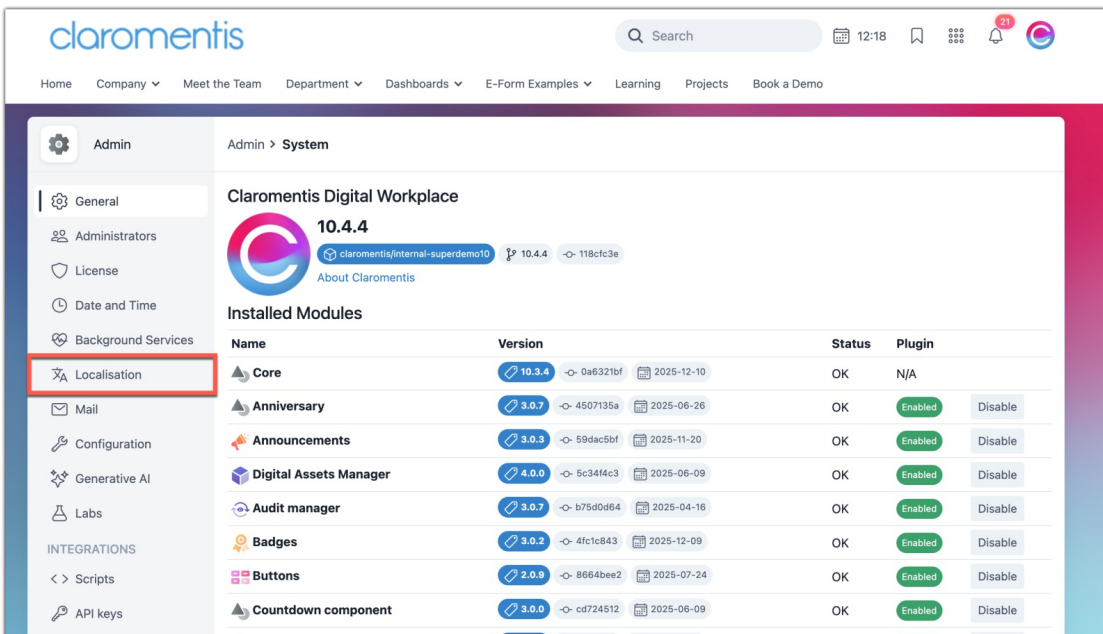

Slight modifications to the template wording likely won't need any twig logic applied; however, for any major changes you wish to apply, follow the formatting detailed [here](#)

A [sysadmin](#) can update notification templates

1. Navigate to **Applications > Admin > System**:

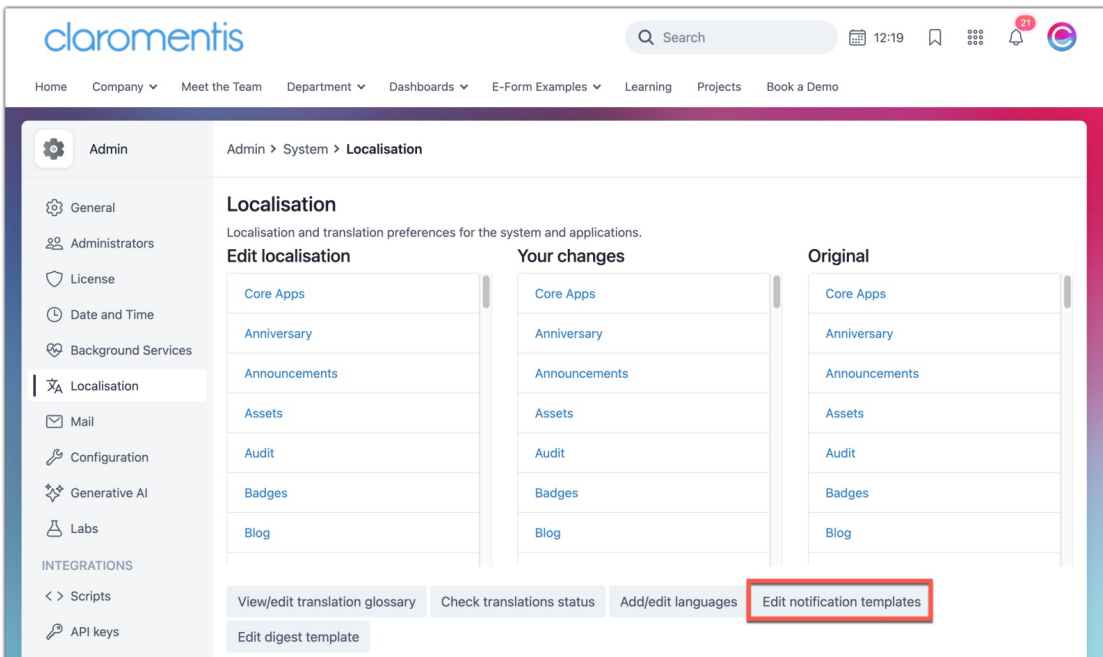

2. Open the **Localisation** tab

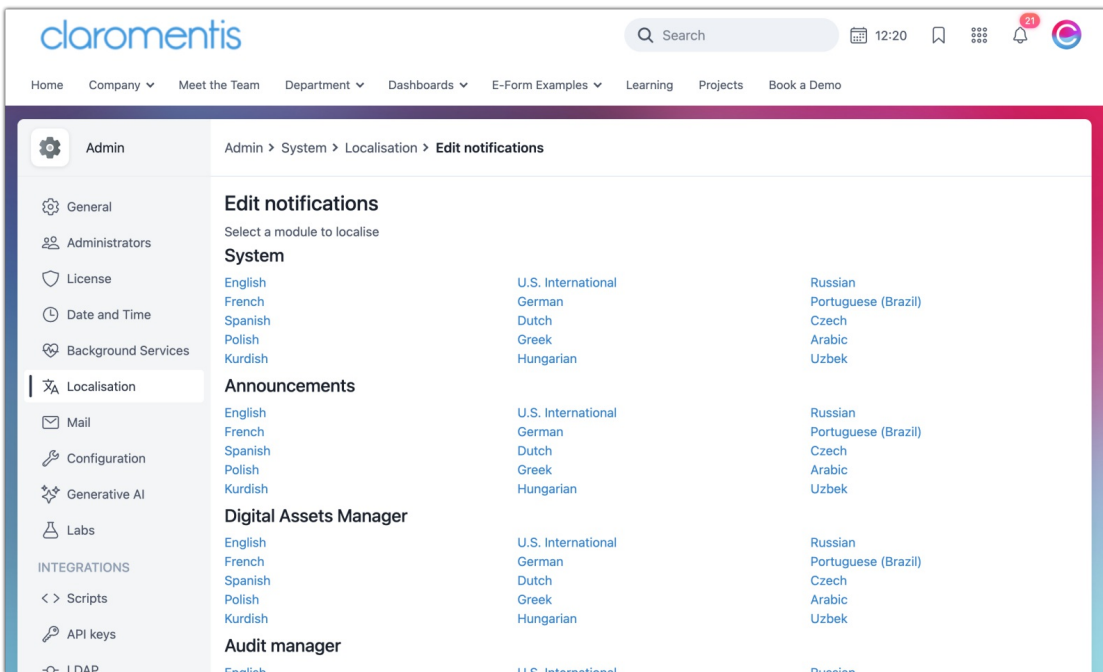

3. In this area, terminology used across the site can be edited. For more information, see our guide on [Localisation](#).

To edit notification templates specifically, click on the button shown below:

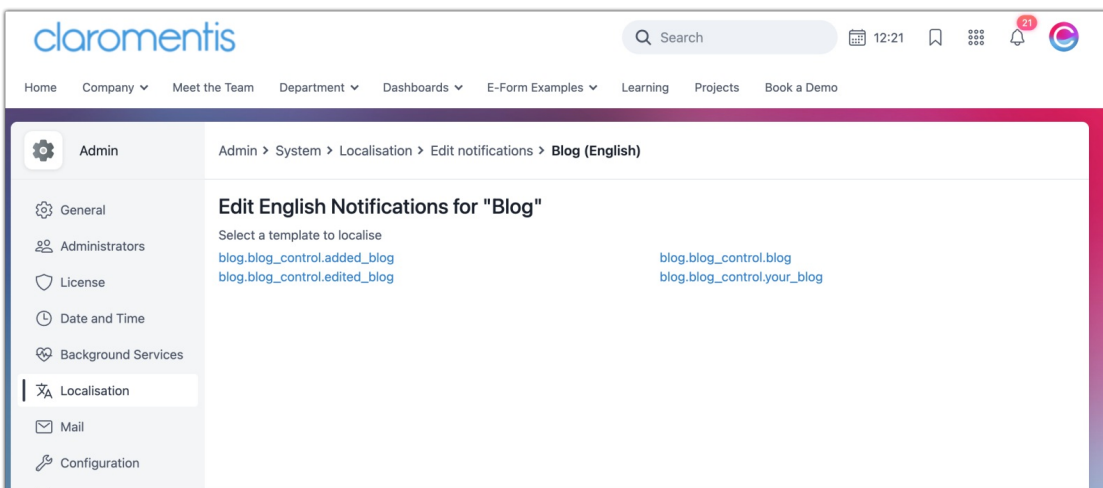

4. Next, locate where the notification template you want to edit is stored and select the language to edit in.

□ **Tip:** Some templates for applications are stored under System

5. The next screen will list the template for every action in that application that triggers a notification.

If an action is not listed, no notification is associated with it.

6. Click on the action you want to edit to open it and make changes, adhering to [Twig logic](#). Click on **Save** to apply.

Changes will appear in notifications generated going forward.

Edit Notification

Editing the notification template "blog.blog_control.added_blog"

Language: English

Template subject

```
1 Blog awaiting approval: {{ title|raw }}
```

Template Body

```
1 <strong>{{ title|raw }}</strong><br />
2 A new blog post was added by {% if is_owner_id %}<a href="{{ link|raw }}">
3 <br />
4 <a href="{{ all_blog_link|raw }}">Approve/Decline this blog post</a>
```

Blog awaiting approval: On Prosperity

On Prosperity

A new blog post was added by John Smith.

[Approve/Decline this blog post](#)

For anything bracketed, the system pulls information from the action triggering the notification.

The subject line of the notification will use the first line of text in the template.

So, to change the subject, move the template down a line and add your own text into the first position.
