

## Configuring Social Connect: Sign-in With Google

### Overview

This is an administrative guide on how to configure Sign-in with Google in the Social Connect Module.

Once this has been configured, users can connect their account with their Google Account allowing them to log in to the system simply by clicking the "Sign-in with Google" button from the Login screen.

Username

 Sign-in With Twitter

 Sign-in With Facebook

 Sign-in With Google

 Sign-in With Microsoft

Powered by Claromentis Digital Workplace

### 1. Sign in to Google Developers Console

Log in to the Google Developers Console with your organisation's Google account and have enough permission to create and edit an existing project.

<https://console.cloud.google.com/>

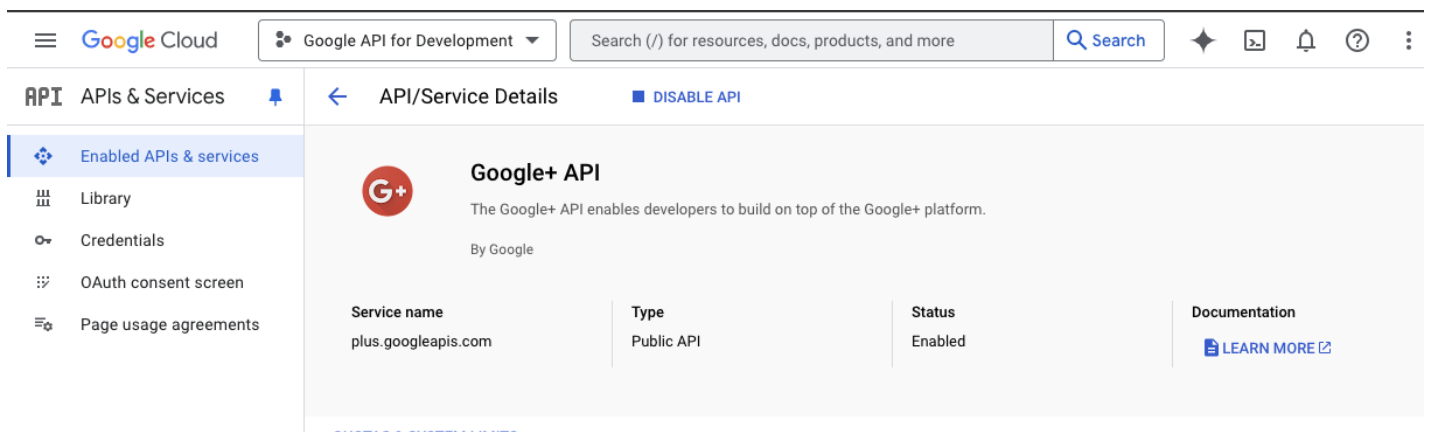

From the project dropdown, choose an existing project for your Intranet/Digital Workplace or create a new project for Claromentis.

If you are an on-prem customer please contact your **Google Cloud Administrator**.

Alternatively, if you are our SaaS customer, please contact our support team to assist you with this configuration and setup.

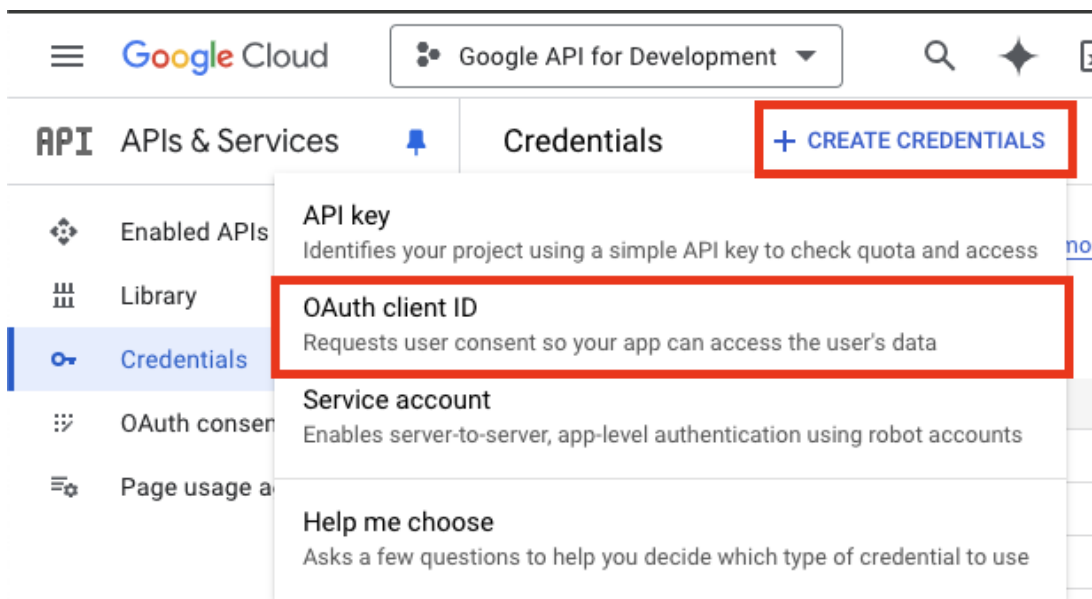

## 2. Enabling API

Under API & Services Enable Google+ API

## 3. Create Credentials

Under Credentials, Create Credentials and choose OAuth client ID

Application type: **Web application**

Name: **Claromentis Social Connect {Your intranet Name}**

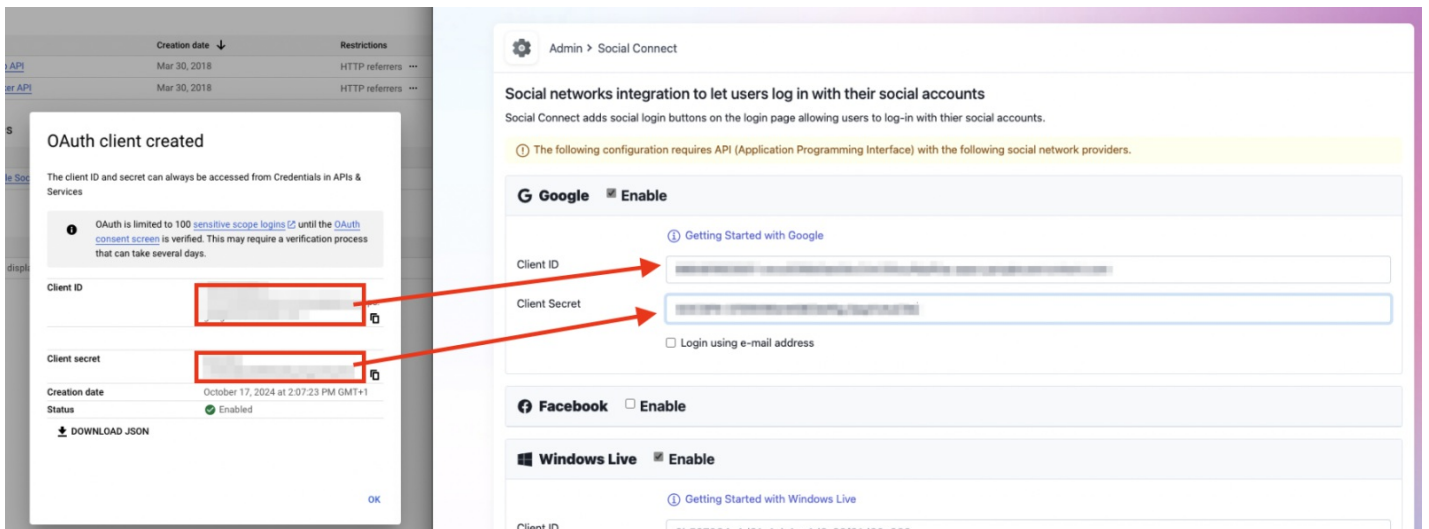

Authorized redirect URIs `https://{your-intranet-url}/socialconnect/google/callback`

Replace {your-intranet-url} with the actual URL of your Claromentis system

Click "Create"

## 4. Getting Client ID and Client Secret

Once created, you will get a popup showing Client ID and Client Secret

The image shows two screenshots. The left screenshot is a modal window titled "OAuth client created". It displays the Client ID and Client Secret, both of which are redacted with grey boxes. Red arrows point from these redacted areas to the corresponding input fields in the right screenshot. The right screenshot is the "Social Connect" configuration page. It shows the "Google" provider configuration with the Client ID and Client Secret fields filled with the values from the popup. Below the Google configuration, there are sections for "Facebook" and "Windows Live", both of which are currently disabled.

## 5. Save Configuration.
